

4-Channel Input Audio Processor IC

PT2314

Description

PT2314 is a four-channel input digital audio processor utilizing CMOS Technology. Volume, Bass, Treble and Balance are incorporated into a single chip. Loudness Function and Selectable Input Gain are also provided to build a highly effective electronic audio processor having the highest performance and reliability with the least external components. All functions are programmable using the I²C Bus. The pin assignments and application circuit are optimized for easy PCB layout and cost saving advantage for audio application.

Features

- ☐ CMOS Technology
- ☐ Least External Components
- ☐ Treble and Bass Control
- ☐ Loudness Function
- ☐ 4 Stereo Inputs with Selectable Input Gain
- ☐ Input/Output for External Noise Reduction System/Equalizer
- ☐ 2 Independent Speaker Controls for Balance Control
- ☐ Independent Mute Function
- ☐ Volume Control in 1.25 dB/step
- ☐ Low Distortion
- ☐ Low Noise and DC Stepping
- ☐ Controlled by I²C Bus Micro-Processor Interface
- ☐ Available in 28 Pins, DIP/SO Package

Applications

- ☐ Car Stereo (Audio)
- ☐ Hi-Fi Audio System

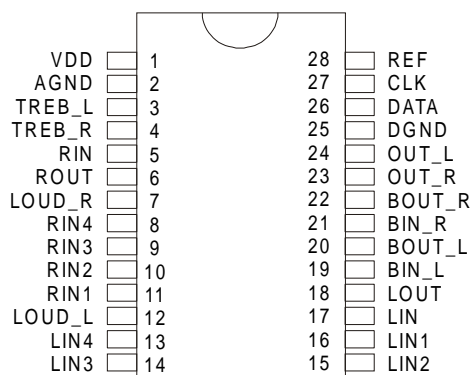

Note: Purchase of I²C Component of Princeton Technology Corporation (PTC) conveys a license under Philips I²C Patent Right to use these components in any I²C System, provided that the system conforms to the I²C Standard Specification defined by Philips

4-Channel Input Audio Processor IC

PT2314

Pin Configuration

PT2314

Order Information

Valid Part Number	Package Type
PT2314-D	28 Pins, DIP (300 mil)
PT2314	28 Pins, SO (300 mil)

4-Channel Input Audio Processor IC

PT2314

Application Circuit

Note: 1. It is suggested that you use Mylar Capacitor for capacitors, C12 ~ C19.

2. Resistor (R) Range = 2.0 K Ohms to 3.6 K Ohms

3. Recommended Value of Resistor (R) = 2.4 K Ohms
