

OUTSTANDING CHARACTERISTICS

- Miniature size
- Very high Q at high frequencies
- High RF power capabilities
- Impervious to environmental conditions
- Low dissipation factors
- Excellent retrace capability (not applicable for X7R styles)
- High temperature stability
- Low noise
- Meets Mil-55681 with respect to: Shock, Vibration, Moisture Resistance, Solderability, Barometric Pressure, Temperature Cycling, Immersion and Salt Spray

ADDITIONAL FEATURES

- Packaging options
- Lot processing data available

MA SERIES

For filtering, coupling and impedance matching in most RF circuits, the MA Series chips and leaded devices offer outstanding performance and reliability with the greatest range of values and configurations. MA Series capacitors can be supplied with military equivalent screening. Please consult our factory.

MA Series ceramic fixed capacitors are miniature, high performance precision components having extremely high Q and high power capabilities from low frequencies to gigahertz ranges. These "low loss" multilayer capacitors are extremely stable with respect to variations in temperature, voltage and frequency.

MA Series capacitors are designed for miniature state-of-the-art circuit applications. They are small,

easy to apply and have excellent reliability. Units are available in ultra-miniature case size 1 (1.4 x 1.4 x 1.4mm) or miniature case size 2 (2.8 x 2.8 x 2.5mm). Standard case size 1 units are available as chips. Standard case size 2 units are available as chips and also in leaded configurations.

Clean-room manufacturing technology assures product reliability and automated processing reduces costs and cycle time. Key stages of the operation are monitored and controlled with the latest SPC techniques. Flexibility in design allows the production of non-standard values, while maintaining consistent quality objectives.

Please contact the factory for availability of special configurations or high-reliability screening.

SPECIAL LEAD CONFIGURATION FOR FLEX BOARDS

NOTE: Targeted for flex circuit boards, the MA22-6 version of the MA22 has an upraised lead configuration. The lead bends when flexing the board after assembly so that minimal stress is placed on the component.

Life	Method 108, Condition F
Marking	Standard MA/MB product is unmarked

Technical drawing of a multi-hole part. The drawing shows a side view of a component with six rectangular holes. The overall width is $1.5^{+0.1}_{-0}$. The distance between the centers of the first and second hole is A_0 . The distance between the centers of the second and third hole is 4.0 ± 0.1 . The distance between the centers of the third and fourth hole is 4.0 ± 0.1 . The distance between the centers of the fourth and fifth hole is 4.0 ± 0.1 . The distance between the centers of the fifth and sixth hole is 4.0 ± 0.1 . The overall length is 2.0 ± 0.1 . The overall height is 8.0 ± 0.3 . The distance from the top surface to the center of the first hole is 1.75 ± 0.1 . The distance from the bottom surface to the center of the first hole is 2.75 . The distance from the top surface to the center of the last hole is 3.5 ± 0.05 . The distance from the bottom surface to the center of the last hole is 2.75 . The distance from the left surface to the center of the first hole is B_0 . The direction of feed is indicated by an arrow pointing to the right.

Unit: mm

NOTE: 1 A_0 & B_0 are determined by maximum specified length and width of components plus 0.016 ± 0.008 , plus the additional requirement that components not be allowed to rotate more than 20° within the cavity clearance or whichever condition occurs first.

PACKAGING:
 Case 1 – 3,000 pcs.
 Case 2 – 1,000 pcs.

The diagram illustrates the packaging of the sensor strip. It shows a roll of the strip being unspooled. The strip has a 'Cover tape' on top and an 'Embossment' on the bottom. The carrier is labeled as an 'Embossed carrier'.

Advantages	Benefits
Conductive	Prevents static charge build-up
Flexibility	Insures against crazing, cracking and brittleness
Dimensional strength	Drive loading will not elongate sprocket holes
Dimensional stability	Smooth, reliable running on pick and place machines

Property	Value	Test Method
Resistivity	5 x 10 ⁵ ohm/square	ASTM D-257
Electrostatic Decay Time At 50% RH@21°C	0.01 Sec.	ASTM D-257
