

DUAL DMOS FULL BRIDGE MOTOR DRIVER

PRELIMINARY DATA

- OPERATING SUPPLY VOLTAGE FROM 8 TO 52V
- 2.8A PEAK CURRENT (1.4A DC)
- $R_{DS(ON)}$ 0.73 Ω TYP. VALUE @ $T_j = 25^\circ\text{C}$
- CROSS CONDUCTION PROTECTION
- THERMAL SHUTDOWN
- OPERATING FREQUENCY UP TO 100KHz
- HIGH SIDE OVER CURRENT PROTECTION
- CMOS/TTL INPUT
- INTRINSIC FAST FREE WHEELING DIODES
- UNDER VOLTAGE LOCKOUT

TYPICAL APPLICATIONS

- STEPPER MOTOR
- DUAL OR QUAD DC MOTOR

DESCRIPTION

The L6225 is a dual full bridge driver for motor control applications manufactured with Multipower BCD technology which combines isolated DMOS power

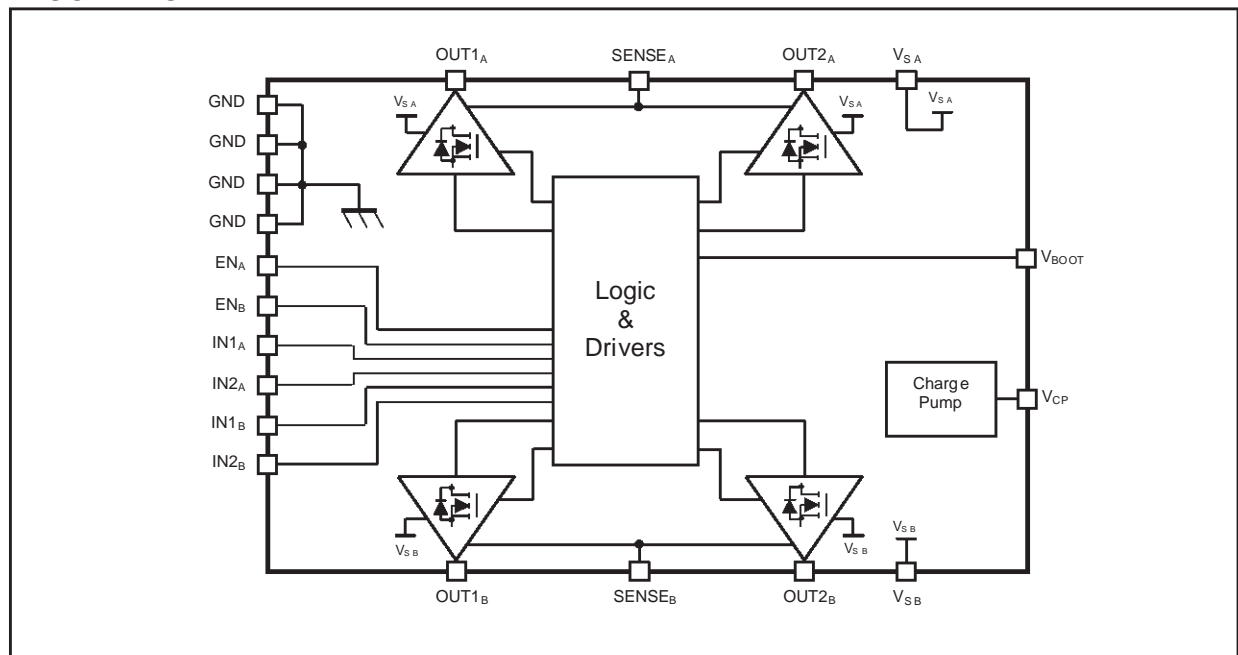

transistors with CMOS and bipolar circuits on the same chip.

The Logic Inputs are CMOS/TTL and μP compatible. The High Side switches are protected against unsafe over current conditions.

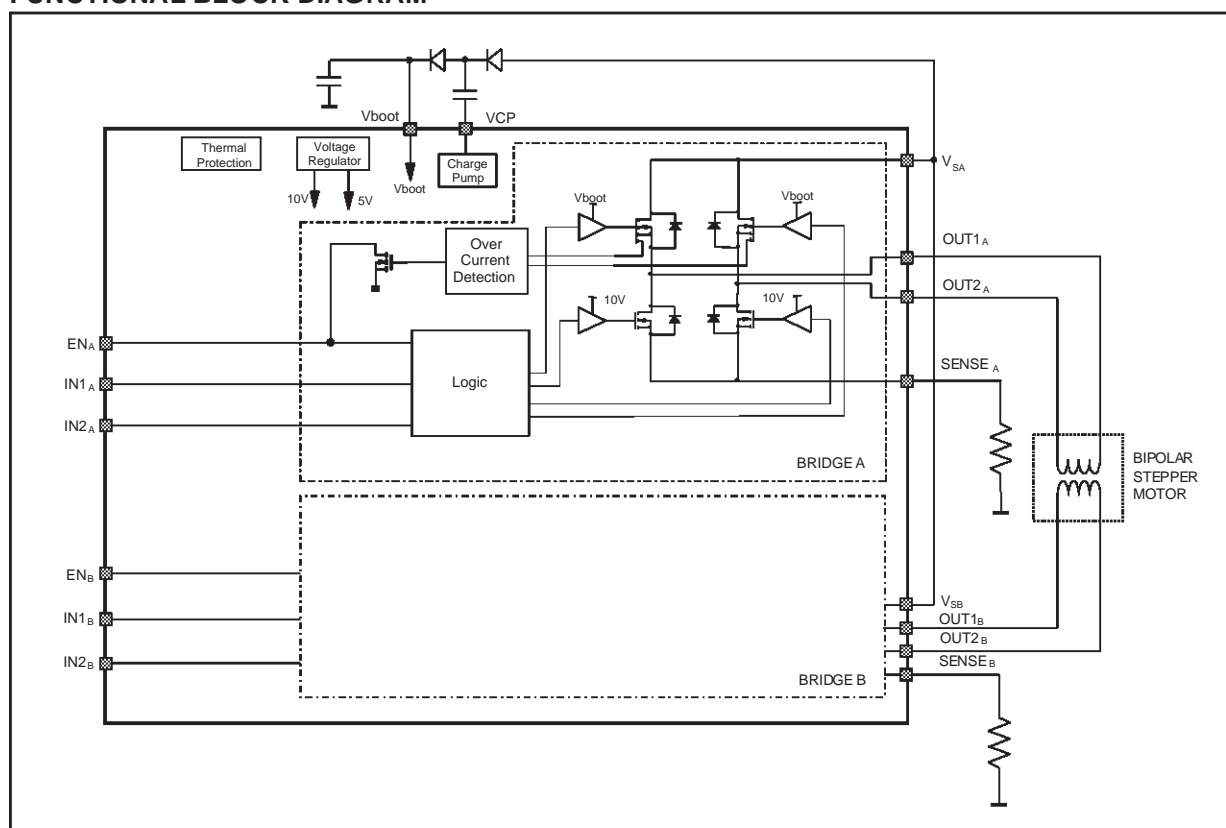

Each full bridge is controlled by a separate Enable and has a sense pin for the current sense resistor insertion. Another feature is the thermal shutdown.

The L6225 is assembled in PowerDIP20(16+2+2), PowerSO20 and SO20(16+2+2) packages.

PIN DESCRIPTION

Name	PowerSO20	PowerDIP20/ SO20	Function
V _{SA}	2	17	Supply Voltage of the Bridge A.
V _{SB}	19	14	Supply Voltage of the Bridge B. This pin must be connected to V _{SA} .
OUT1 _A OUT2 _A	9 3	4 18	Bridge A outputs.
OUT1 _B OUT2 _B	12 18	7 13	Bridge B outputs.
SENSE _A	8	3	Sense resistor for the bridge A
SENSE _B	13	8	Sense resistor for the bridge B
GND	1,10,11,20	5, 6,15,16	Common ground terminals. In Powerdip and SO packages, these pins are also used for heat dissipation toward the PCB.
EN _A	5	20	Enable of the Bridge A. A LOW logic level applied to this pin switches off all the power DMOSs of the related bridge. The Bridge A over current protection open drain is internally connected to this pin.
EN _B	16	11	Enable of the Bridge B. A LOW logic level applied to this pin switches off all the power DMOSs of the related bridge. The Bridge B over current protection open drain is internally connected to this pin.
IN1 _A IN2 _A	6 7	1 2	Logic inputs of the Bridge B. Provided the ENA signal is HIGH, a HIGH logic level applied to any of these pins switches on the related high side power DMOS, while a logic LOW switches on the related low side power DMOS.
IN1 _B IN2 _B	14 15	9 10	Logic inputs of the Bridge B. Provided the ENB signal is HIGH, a HIGH logic level applied to any of these pins switches on the related high side power DMOS, while a logic LOW switches on the related low side power DMOS.
V _{CP}	4	19	Bootstrap Oscillator. Oscillator output for the external charge pump.
V _{BOOT}	17	12	Supply voltage to overdrive the upper DMOSs.

CIRCUIT DESCRIPTION

The L6225 is a dual full bridge IC designed to drive DC or stepper motors and other inductive loads. Each bridge has 4 power DMOS transistors with a typical $R_{DS(ON)}$ of 0.3 Ohm. Any of the 4 half bridges can be controlled independently by means of the 4 TTL/CMOS compatible inputs IN1_A, IN2_A, IN1_B, IN2_B, and 2 enable ENA, ENB. External connections are provided so that sensing resistor can be added for constant current chopping application. A non dissipative current sensing on the supply rails of the high side power DMOSs of each bridge, an internal reference and an internal open drain, with a pull down capability of 4mA (typical value), will pull to GND the EN-ABLE pin of the bridge under fault conditions, turning OFF all the four PowerDMOSs. This ensures a protection against short circuit to GND and between two phases of each of the two independent full bridges. By using an external R-C on the EN pins, the off time before recovering normal operation conditions after a fault can be easily programmed, by means of the accurate threshold of the logic inputs. Note that protection against short to the supply rail is typically provided by the external current control circuitry. The trip point of this protection is set at 2.8A (typ value).
