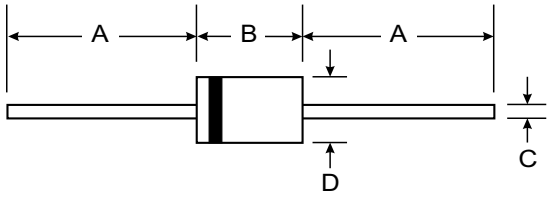
1N5344B - 1N5388B

5W ZENER DIODE

Features

- Voltage Range 8.2V - 200V
- Glass Passivated Junction
- 5W Steady State
- High Surge Capability
- ±5% Voltage Tolerance on Nominal V_Z is Standard
- 100% Tested



5W		
Dim	**Min**	**Max**
A	25.40	—
B	8.38	8.89
C	0.94	1.09
D	3.30	3.68
All Dimensions in mm		

Mechanical Data

- Case: Molded Plastic Over Glass Passivated Junction
- Leads: Solderable per MIL-STD-202, Method 208
- Polarity: Cathode Band
- Approx. Weight: 1.2 grams

Maximum Ratings @ T_A = 25°C unless otherwise specified

	Symbol	Value	Unit
DC Power Dissipation @ T_L = 75°C 9.5mm from Body (Board Mounted)	P_d	5.0	W
Power Derating Above 75°C Lead Temperature	—	20	°C/W
Operating and Storage Temperature Range	T_j, T_{STG}	-55 to +175	°C

Notes:
1. Nominal Zener Voltage (V_Z) is read with the device in standard test clips with 3/8- to 1/2-inch spacing between clip and case of the diode. Before reading, the diode is allowed to stabilize for a period of 40 ±10 milliseconds at 25°C +8, -2°C.
2. The Zener Impedance (Z_Z or Z_{ZK}) is derived from the 60 Hz ac voltage, which results when an ac current having an rms value equal to 10% of the dc zener current (I_{ZT} or I_{ZK}) is superimposed on I_{ZT} or I_{ZK}, respectively.
3. The Surge Current (I_{ZSM}) is specified as the maximum peak of a nonrecurrent sine wave of 8.3 milliseconds duration.
4. Voltage regulation (ΔV_Z) is the difference between the voltage measured at 10% and 50% of I_{ZM}.

Electrical Characteristics @ T_A = 25°C unless otherwise specified

Part Number	Regulator Voltage (V_Z) Volts	Test Current (I_Z) mA dc	Maximum Dynamic Impedance (Z_Z) Ohms	Maximum Reverse Current (I_R) µA	I_R Test Voltage (V_R) Volts	Maximum Regulator Current (I_{ZM}) mA	Maximum Dynamic Knee Impedance (Z_{ZK} @1.0mA) Ohms	Maximum Surge Current (I_{ZSM}) Amperes	Maximum Voltage Regulation (ΔV_Z) Volts

V_F = 1.2V max at I_F = 1.0A all types.
Suffix 'B' denotes 5% tolerance which is standard.
