DESCRIPTION

The T1620/1630W triacs use high performance glass passivated chip technology, housed in a fully molded plastic ISOWATT220AB package.

The SNUBBERLESS™ concept offers suppression of R-C network, and is suitable for applications such as phase control and static switch on inductive and resistive loads.

* For either polarity of electrode A2 voltage with reference to electrode A1.

Note : In usual applications where (dI/dt)c is below 9 A/ms, the (dV/dt)c is always lower than 10V/µs, and, therefore, it is **unnecessary** to use a snuber R-C network accross T1620W / T1630W triacs.
