

High Precision Rail-to-Rail Operational Amplifier

PRELIMINARY DATA

- Ultra low offset voltage: 60 μ V max
- Rail-to rail input/output voltage swing
- Operating from 2.7V to 5.5V
- High-speed: 2.2MHz
- Low consumption: 0.85mA
- Supply voltage rejection ratio: 85dB
- ESD protection 2kV
- Latch-up immunity
- Available in SOT23-5 micropackage

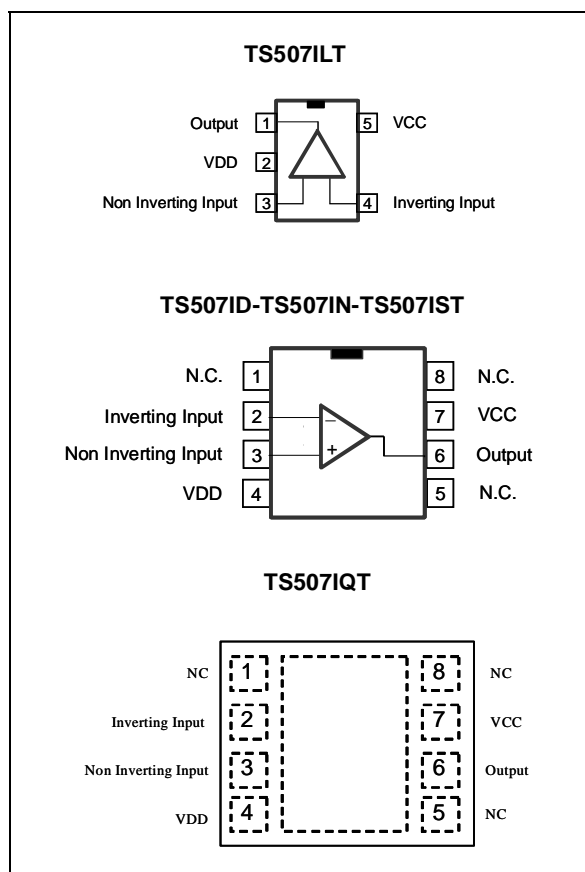

Description

The TS507 is a high performance rail-to-rail output amplifier with very low offset voltage. This amplifier uses a new trimming technique that yields ultra low offset voltages without any need for external nulling.

The circuit presents very stable electrical characteristics over the entire supply voltage range, and is particularly intended for professional and telecom applications.

The TS507 is housed in the space-saving 5 pins SOT23 package that makes it well suited for battery-powered systems. This micropackage simplifies the PC board design because of it's ability to be placed in tight spaces (outside dimensions are: 2.8mm x 2.9mm)

Applications

- Precision filters
- Transformer/line drivers
- Personal entertainments (CD players)
- Portable communication (cell phones, pagers)
- Instrumentation & sensing

1) All voltage values, except differential voltage are with respect to network ground terminal.

2) Differential voltages are the non-inverting input terminal with respect to the inverting input terminal.

3) The magnitude of input and output voltages must never exceed V_{CC} +0.3V.

4) Short-circuits can cause excessive heating and destructive dissipation.

The diagram illustrates the mechanical specifications of the DFN8 (3x3) package. The top view shows a square footprint with dimensions D (total width), D2 (inner width), E (total height), and E2 (inner height). The pin pitch is denoted by 'e', and the pin width by 'b'. The pins are numbered 1 through 8. The side view shows the package height 'A', the standoff height 'A1', the solder thickness 'A2', and the seating plane 'A3'. A cross-section symbol 'C' is indicated on both views.
