

MSLU300 Series

1W, High Isolation SMD, Single & Dual Output DC/DC Converters

Key Features

- Efficiency up to 79%
- 3000VDC Isolation
- Low Cost
- Input 5, 12 and 24VDC
- Output 3.3, 5, 12, 15, ± 5 , ± 12 and ± 15 VDC
- Temperature Performance -25°C to $+75^{\circ}\text{C}$
- UL 94V-0 Package Material
- Internal SMD Construction

SMD

I/O Isolation

Low Cost

Low Profile

Minmax's MSLU300 1W DC/DC's are in "gull-wing" SMT package. The series is designed to provide high levels of isolation 3000VDC. It consists of 21 models with input voltages of 5V, 12V and 24VDC which offers standard output voltages of 3.3V, 5V, 12V, 15V, ± 5 V, ± 12 V and ± 15 VDC for the choice.

Their impressive guaranteed efficiencies enable all models to deliver their fully rated output power from -25°C to $+75^{\circ}\text{C}$ without heat sinking or forced-air cooling.

The MSLU300 series is an excellent selection for a variety of applications including data communication equipments, distributed power systems, telecommunication equipments and industrial robot systems.

The MSLU300 units are available in tape and reel package.

Absolute Maximum Ratings

Parameter		Min.	Max.	Unit
Input Surge Voltage (1000 mS)	5VDC Input Models	-0.7	9	VDC
	12VDC Input Models	-0.7	18	VDC
	24VDC Input Models	-0.7	30	VDC
Lead Temperature (1.5mm from case for 10 Sec.)		---	300	$^{\circ}\text{C}$
Internal Power Dissipation		---	550	mW

Exceeding the absolute maximum ratings of the unit could cause damage. These are not continuous operating ratings.

Leadfree Reflow Solder Process as per IPC/JEDEC J-STD-020C peak temp. 245C/10 sec.

Environmental Specifications

Parameter	Conditions	Min.	Max.	Unit
Operating Temperature	Ambient	-25	+75	$^{\circ}\text{C}$
Operating Temperature	Case	-25	+90	$^{\circ}\text{C}$
Storage Temperature		-25	+125	$^{\circ}\text{C}$
Humidity		--	95	%
Cooling	Free-Air Convection			

Model Selection Guide

Model Number	Input Voltage	Output Voltage	Output Current		Input Current		Load Regulation	Efficiency
			Max.	Min.	@Max. Load	@No Load		
	VDC	VDC	mA	mA	mA (Typ.)	mA (Typ.)	%(Max.)	%(Typ.)
MSLU301	5 (4.5 ~ 5.5)	3.3	260	5	238	30	10	72
MSLU302		5	200	4	267		10	75
MSLU304		12	84	2	255		7	79
MSLU305		15	67	1.5	251		7	80

Ripple & Noise (20MHz)		---	75	100	mV P-P
Ripple & Noise (20MHz)	Over Line, Load & Temp.	---	---	150	mV P-P
Ripple & Noise (20MHz)		---	---	15	mV rms
Temperature Coefficient		---	± 0.01	± 0.02	%/°C
Output Short Circuit	0.5 Second Max.				

General Specifications

Parameter	Conditions	Min.	Typ.	Max.	Unit
Isolation Voltage Rated	60 Seconds	3000	---	---	VDC
Isolation Voltage Test	Flash Tested for 1 Second	3300	---	---	VDC
Isolation Resistance	500VDC	10	---	---	GΩ
Isolation Capacitance	100KHz, 1V	---	60	100	pF
Switching Frequency		50	100	150	KHz
MTBF	MIL-HDBK-217F @ 25°C, Ground Benign	2	---	---	M Hours

Notes :

1. Specifications typical at $T_a=+25^\circ\text{C}$, resistive load, nominal input voltage, rated output current unless otherwise noted.
2. Ripple & Noise measurement bandwidth is 0-20 MHz.
3. These power converters require a minimum output loading to maintain specified regulation.
4. Operation under no-load conditions will not damage these modules; however, they may not meet all specifications listed.
5. All DC/DC converters should be externally fused on the front end for protection.
6. Other input and output voltage may be available, please contact factory.
7. Specifications subject to change without notice.
8. It is not recommended to use water-washing process on SMT units.

Test Configurations

Peak-to-Peak Output Noise Measurement Test

Use a C_{out} 0.33 μ F ceramic capacitor.

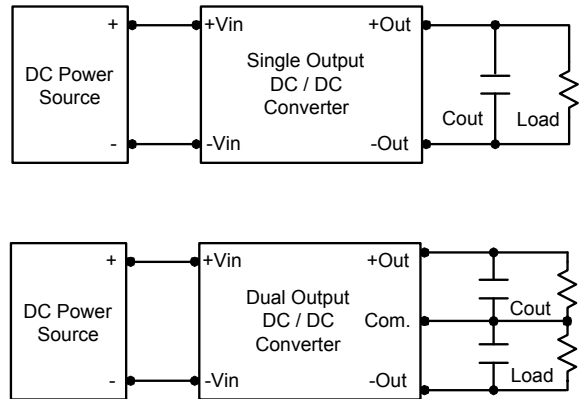

Scope measurement should be made by using a BNC socket, measurement bandwidth is 0–20 MHz. Position the load between 50 mm and 75 mm from the DC/DC Converter.

Output Ripple Reduction

A good quality low ESR capacitor placed as close as practicable across the load will give the best ripple and noise performance.

To reduce output ripple, it is recommended to use 1.0 μ F capacitors at the output.

Design & Feature Considerations

Maximum Capacitive Load

The MSLU300 series has limitation of maximum connected capacitance at the output.

The power module may be operated in current limiting mode during start-up, affecting the ramp-up and the startup time.

The maximum capacitance can be found in the data sheet.

Input Source Impedance

The power module should be connected to a low ac-impedance input source. Highly inductive source impedances can affect the stability of the power module.

In applications where power is supplied over long lines and output loading is high, it may be necessary to use a capacitor at the input to ensure startup.

Capacitor mounted close to the power module helps ensure stability of the unit, it is recommended to use a good quality low Equivalent Series Resistance ($ESR < 1.0\Omega$ at 100 KHz) capacitor of a 2.2 μ F for the 5V input devices, a 1.0 μ F for the 12V input devices and a 0.47 μ F for the 24V devices.

Thermal Considerations

Many conditions affect the thermal performance of the power module, such as orientation, airflow over the module and board spacing. To avoid exceeding the maximum temperature rating of the components inside the power module, the case temperature must be kept below 90°C.

The derating curves are determined from measurements obtained in an experimental apparatus.
