

INFRARED RECEIVER MODULE

Description

The HL-1238 is miniaturized infrared receivers for remote control and other applications requiring improved ambient light rejection.

The separate PIN diode and preamplifier IC are assembled on a single leadframe.

The epoxy package contains a special IR filter.

This module has excellent performance even in disturbed ambient light applications and provides protection against uncontrolled output pulses.

Features

- Photo detector and preamplifier in one package .
- Internal filter for PCM frequency.
- Inner shield,good anti-interference ability.
- High immunity against ambient light.
- Improved shielding against electric field disturbance
- 3.0V or 5.0V supply voltage; low power consumption.
- TTL and CMOS compatibility.
- **8ms data pause time codes are acceptable .**

Applications:

1. Optical switch
2. Light detecting protion of remote contol
 - AV instruments such as Audio,TV,VCR,CD,MD,DVD,etc.
 - Home appliances such as Air-conditioner,Fan,etc.
 - CATV set top boxes
 - Multi-media Equipment
