Item	Series	Features
Disk Type	V Series	Very Large Surge Capability
	SE Series	Non Flammable Type Very Large Surge Capability
	SV Series	Non Flammable and Little Scatter Type Very Large Surge Capability
	H Series	High Energy Low Voltage
	GF Series	Disk Type with Thermal Fuse
	32HP Series	High Energy with Heat Sink
Axial Lead Type	A Series	Axial Lead Type High Voltage
Case Type	E Series	Case Type High Energy

**1** The performance of varistors may deteriorate, the inside elements may be damaged, and they cause the varistors to smoke or catch fire, if the following precautions are not observed.

- (1) Do not use varistors in places whose temperature exceeds their rated operating temperature due to direct sunlight or heating objects.
- (2) Do not use varistors in a humid place directly exposed to the weather or steam.
- (3) Do not use varistors in places filled with dust, salt-mist or corrosive gas.
- (4) Apply soldering conditions within the limits prescribed in the catalog or product specifications.
- (5) Do not use solvents such as thinner and acetone which dissolve or make the exterior covering of varistors deteriorate.  
Ultrasonic cleaning shall be so set that the vibration can not travel the assembly boards.
- (6) Do not expose varistors to intense vibration, shock (drop shock etc.) or pressure making the exterior covering or inside element crack.
- (7) Do not apply high voltage exceeding the rated maximum applying voltage to varistors.  
In the case of automotive jump starts, however, use the varistors within short-term allowable voltage limits prescribed in the catalog.  
If voltage wave form is not complete DC, a maximum value of peak voltages shall not exceed the rated maximum applying voltage.
- (8) Do not apply peak currents exceeding the rated maximum energy.
- (9) When peak currents are repeatedly applied to varistors, do not exceed the pulse life time ratings prescribed in the catalog.
- (10) When peak currents are intermittently applied to varistors at short intervals, do not exceed the rated wattage.
- (11) Using varistors in circuits whose frequency exceeds 1kHz may damage their elements by heat generation due to dielectric loss.
- (12) In the case of coating or molding varistors with resin, do not use the resin which makes the varistors deteriorate.
- (13) Do not install varistors in places near by flammable substances.

**2** Varistors may blow up, if the following precautions are not observed.

- (1) Do not use varistors in circuits applied peak currents exceeding the specified limits.
- (2) Do not exceed the rated maximum applying voltage.

**3** Varistors do not function but damages devices, if the following precautions are not observed.

- (1) Hold the root of the varistor lead when bending or cutting the lead.
- (2) The lead close to insulation cover shall not be bent or applied to outer force.
- (3) When soldering the lead, do not damage a solder material and insulator fabricating the varistor.

**4** The following preventive measures should be made for avoiding unexpected accident.

- (1) When using a varistor in between circuits, connect an earth leakage breaker (ground-fault circuit interrupter) or current fuse in series with the varistor.
- (2) When using a varistor in between a circuit and ground, connect an earth leakage breaker (ground-fault circuit interrupter) or both of a current fuse and thermal fuse in series with the varistor. Also, in case of excessive voltage due to ground short circuit accident, use the varistor with the rated voltage higher than the excessive voltage.

**5** Store varistors at a temperature of -10 to + 40°C and a relative humidity of less than 75%.

Avoid storing in environment of rapid changes in temperature, direct sunlight, corrosive gas or dust, and store with the varistors packaged and use within 1 year.

Please confirm soldering of the lead wire with the product stored in a long time in more than 1 year.

**6** Follow safety standards such as Electrical, UL, CSA and so forth, which specify the use of varistors.

**7** Catalogs

Specifications in catalogs may be subject to change without notice.

Performance test data in the catalogs show typical values, which are not assured in the catalogs.

**8** Regarding compliance for EU REACH Regulation

According to the content of REACH handbook (Guidance on requirements for substances in articles which is published on May 2008), our electronic components are "articles without any intended release". Therefore they are not applicable for "Registration" for EU REACH Regulation Article 7 (1).

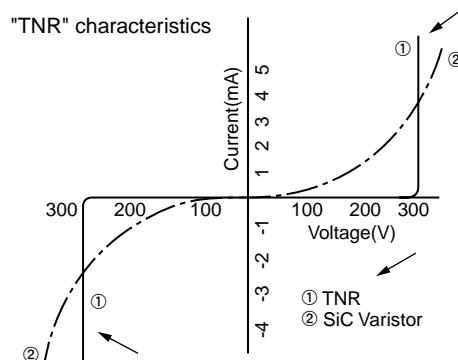

Reference: Electrolytic Condenser Investigation Society

"Study of REACH Regulation in EU about Electrolytic Capacitor" (publicized on 13 March 2008)

TNR is a "NEW" metal oxide varistor having steep non-linear V-I characteristics and high discharge current capability, as follows:

### ◆TNR Features

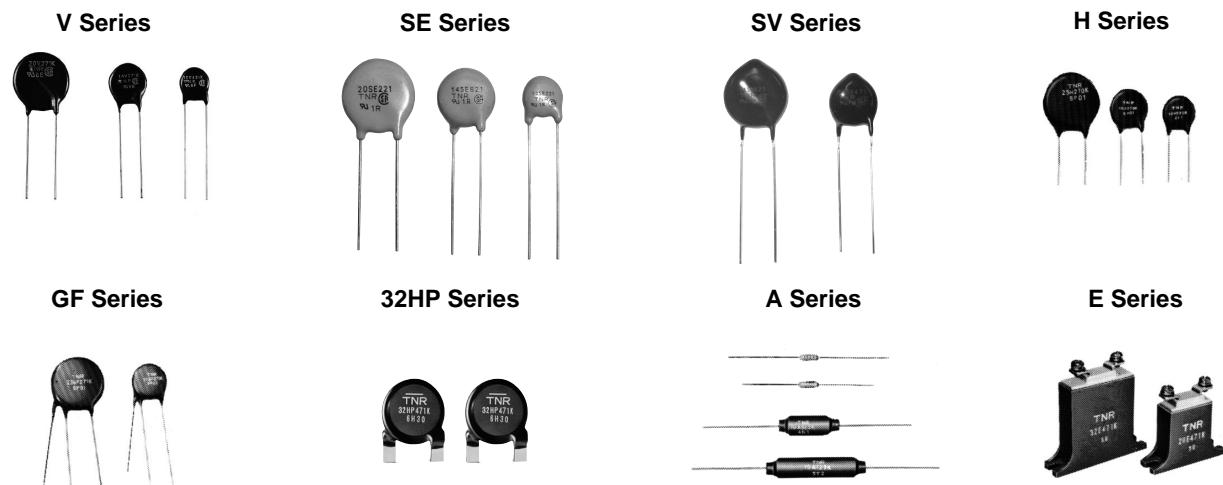

1. Excellent transient voltage suppression
2. High discharge current capability
3. Wide range of voltage ratings
4. Symmetrical V-I characteristics (Non Polarity)
5. Fast response
6. Steady operation for repeating surge
7. Low temperature coefficient
8. High reliability
9. UL recognized
10. CSA recognized

### ◆Applications

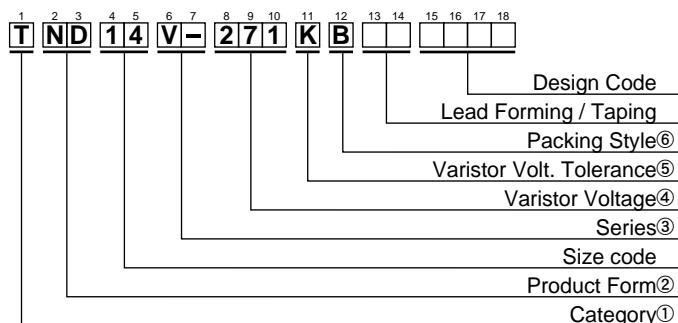

1. Electronics instrument protection
2. Telephone system protection
3. Relay contact point protection
4. Rectification diode protection
5. SCR protection
6. Reduction of abnormal voltage in high voltage current
7. Switching transistor protection
8. Reduction of switching surge in electromagnetic brake
9. Prevention of error in digital circuit
10. Reduction of noise from an abnormal voltage

### ◆Group Chart

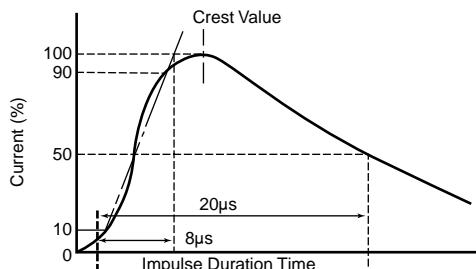

### ◆Part Numbering System

The current parts numbering system is changed to new system for global coding.  
Your cooperation will be very much appreciated.

①Category		④Varistor Voltage

NL	Sleeve Type	B	Bulk
V-		T	
V Series		Taping	

Technical Term	Description
Varistor Voltage	Voltage across the varistor measured at CmA DC. $C = 0.1$ or $1.0$ as specified.
Max. Allowable Voltage (ACrms)	Maximum continuous sinusoidal RMS voltage which may be applied.
Max. Allowable Voltage (DC)	Maximum continuous DC voltage which may be applied.
Maximum Clamping Voltage	Peak voltage across the varistor, measured under conditions of a specified peak impulse current and specified waveform ( $8/20\mu s$ ) applied 1 time.
Rated Wattage	Maximum power that can be applied within the specified ambient temperature.
Maximum Peak Current	Maximum current within the $\pm 10\%$ varistor voltage change with standard impulse current ( $8/20\mu s$ ) applied 1 time.
Current Wave Form for Clamping Voltage Test and Maximum Peak Current	
Energy	Maximum energy within the $\pm 10\%$ varistor voltage change when 1 impulse $\tau$ msec long is applied. $\tau = 2$ or 20 ms as specified.
Capacitance	Typical value measured at a 1kHz test frequency. (Sin wave. Reference purpose only)

## ◆Application Notes

1) CSA regulate "Maximum Rating Fuse" for using TNR to "Audio, Video and Similar Electronic Equipment" as below

Maximum Peak Current 8/20μs, 1 time(A)	Type of TNR	Maximum Rating of Fuse (A)
Up to 500		3
501~2000	TND05V, TND07V	5
2001~6000	TND09V, TND10V, TND12V, TND14V	10
Over 6000	TND20V	Not specified

2) "Rated Voltages" are specified for UL/CSA recognized components besides Maximum Allowable Voltage because of conforming to the Standby Current specified in safety standards.

In case of making an application to UL/CSA approval for equipment with TNR, the maximum AC operating voltage of equipment shall be lower than the TNR Rated Voltage.

## ◆Packaging Quantity

Type	Taping Code	150K~271K	331K~621K
5V, 7V, 9V, 9H	TFA, TBA(T15, T25)	1,500	1,000
10V, 12V, 14V	TEA, TFA, TAA, TBA (T1, T15, T2, T25)	800	500
10SE, 12SE, 14SE		600	500
12H, 15H		800	
10V, 12V, 14V	TFB, TBB (T8, T7)	1,000	1,000
10SE		1,000	800
12SE, 14SE		500	400
10SV, 12SV	TLB (T71)	500	500
14SV		300	300

NOTE : The code (T1, T15, T2, T25, T8, T7) are the old taping code

## ◆Others

- 1) On the box or the reel, the following are noted.
  1. Part number
  2. Lot number
  3. Quantity
  4. Country of origin
- 2) Minimum order quantity shall be the packaging quantity per one box one reel.

**MINIMUM ORDER QUANTITY**

Please order by units of minimum order quantity.

**◆Disk Type**

Series	Type	Varistor Voltage Range (V)	Straight Lead Quantity (pcs)	Formed/Cut Lead Quantity (pcs)
V	5V, 7V, 9V	All Voltage Range	100	100
	10V, 12V	All Voltage Range	100	100
	14V	15~1200	100	100
		1500~1800	50	50
	20V	18~1100	50	50
		1200~1800	25	25
SE	20SE	All Voltage Range	50	50
H	9H, 12H, 15H	All Voltage Range	100	100
	23H	All Voltage Range	50	50
GF	15GF	All Voltage Range	50	—
	23GF	All Voltage Range	25	—
32HP	—	All Voltage Range	5	—

**◆Axial Lead Type**

Series	Type	Varistor Voltage Range (V)	Straight Lead Quantity (pcs)	Formed/Cut Lead Quantity (pcs)
A	4A	All Voltage Range	100	—
	10A	All Voltage Range	50	—

# V Series

## ◆FEATURES

- Large surge capability (the surge current ratings of TNR V series, by 8/20 µs, are about two times larger than TNR G series).
- Large energy capability (1.5 time larger than TNR G series).
- One rank smaller TNR V has same peak current as TNR G.
- Excellent voltage non-linear coefficient.  
Low clamping voltage.
- Symmetrical V-I characteristics (No polarity).
- Fast response.
- Stable characteristics against repeated surges.
- Superior temperature characteristics.
- High reliability
- UL, CSA and VDE recognized components  
UL 1449 3rd File : E323623  
UL 1414 File : E65426 (Except "12V")  
CSA File : LR97864  
VDE File : 118623

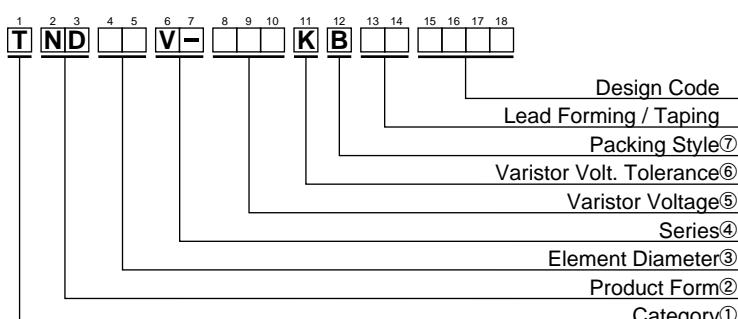

## ◆APPLICATIONS

- Protection for semiconductors from over voltage.
- Protection for electronic instruments from lightning surges.
- Absorption of on-off surges from motors and relays.

Operating Temperature Range: -40 to +85°C  
Storage Temperature Range: -50 to +125°C

## ◆PART NUMBERING SYSTEM

①Category	
T	Metal Oxide Varistors TNR

②Product Form	
ND	Disk Type

③Element Diameter	
05	φ 5 mm
07	φ 7 mm
09	φ 9 mm
10	φ10 mm
12	φ12 mm
14	φ14 mm
20	φ20 mm

④Series	
V-	V Series

⑤Varistor Voltage	
The first two digits are significant figures and the third one denotes the number of following zeros.	

⑥Varistor Volt. Tolerance	
K	±10%

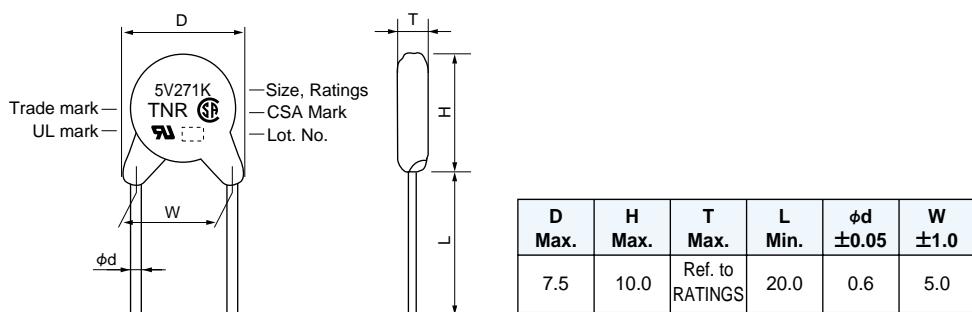

⑦Packing Style	
B	Bulk
T	Taping

# V Series

# V Series

## ◆V-I CURVE (Type 20V)

## V Series

## ◆GENERAL SPECIFICATIONS

Item	Test Conditions		Specifications
<b>Standard Test Condition</b>	20±5°C, 65±20%RH unless specified. However, if it does not affect test result, the condition can be 20±15°C, 65±20%RH also.		
<b>Varistor Voltage</b>	Voltage across varistor at specified current.		Satisfy the specification
	Type	Current CmA	
	5V	0.1	
	7V, 9V, 10V, 12V, 14V, 20V	1.0	
<b>Maximum Allowable Voltage</b>	Maximum continuous AC voltage (50 to 60Hz AC) and maximum DC voltage which can be applied.		Satisfy the specification
<b>Maximum Peak Surge Current</b>	Maximum surge current (8/20μs pulse wave to be applied once, or twice, 2 minutes apart) for varistor voltage change within ±10% of the initial value.		Satisfy the specification
<b>Energy Rating</b>	Maximum energy (2 ms. square wave to be applied once) for varistor voltage change within ±10% of the initial value.		Satisfy the specification
<b>Rated Wattage</b>	Maximum power (50 to 60Hz AC power to be applied for 1000 hours at 85±2°C) for varistor voltage change within ±10% of the initial value.		Satisfy the specification
<b>Maximum Clamping Voltage</b>	Maximum voltage across varistor when 8/20μs rated current surge is applied.		Satisfy the specification
<b>Capacitance</b>	Varistor's capacitance at 1kHz, standard test condition.		For reference only.
<b>Voltage Temperature Coefficient</b>	$\frac{V_{cmA} \text{ at } 85^\circ\text{C} - V_{cmA} \text{ at } 25^\circ\text{C}}{V_{cmA} \text{ at } 25^\circ\text{C}} \times \frac{1}{60} \times 100 (\%/\text{°C})$ VcmA : Actual varistor voltage		Within ±0.05%/°C
<b>Insulation</b>	Short circuit the two leads of varistor, and put the varistor body into metal balls (1.6mm diameter) leaving 2mm epoxy coating outside. Then, apply 2.5kVrms between the leads and the metal balls for 60±5 sec..		The varistor shall withstand with no abnormality.

## ◆ENVIRONMENTAL CHARACTERISTICS

Item	Test Conditions	Specifications
<b>High Temperature Storage (Dry heat)</b>	The specimen shall be subjected 125±2°C for 1000±12 hours without load.	$\Delta V_{cmA} \leq \pm 5\%$ However, on varistors have nominal varistor voltages from 15V to 68V, the varistor voltage change shall be $\Delta V_{cmA} \leq \pm 10\%$
<b>Low Temperature Storage</b>	The specimen shall be subjected -40±2°C for 1000±12 hours without load.	$\Delta V_{cmA} \leq \pm 5\%$
<b>Damp heat (Humidity)</b>	The specimen shall be subjected to 40±2°C, 90 to 95%RH for 1000±12 hours without load.	$\Delta V_{cmA} \leq \pm 5\%$
<b>Temperature Cycle</b>	The temperature cycle shown below shall be repeated 5 cycles. -40±3°C, 30 minutes ⇔ +85±2°C, 30 minutes	$\Delta V_{cmA} \leq \pm 5\%$ No remarkable damage
<b>High Temperature Operating</b>	The specimen shall be subjected to 85±2°C with the maximum allowable voltage for 1000±12 hours.	$\Delta V_{cmA} \leq \pm 10\%$
<b>Damp heat Operating</b>	The specimen shall be subjected to 40±2°C, 90 to 95%RH with the maximum allowable voltage for 1000±12 hours.	$\Delta V_{cmA} \leq \pm 10\%$

Varistor voltage change of forward direction shall be measured in the test of unipolar surge life and DC load life.

Varistor voltage change is measured after stored at Standard Test Conditions for 1 to 2 hours.

Note : For 42V battery line, please contact our sales office.

## V Series

## ◆MECHANICAL CHARACTERISTICS

Item	Test Conditions			Specifications												
Resistance to Soldering Heat	<p>Each lead shall be dipped into a solder bath having a temperature of <math>350 \pm 10^\circ\text{C}</math> to a point 2.0 to 2.5 mm from the body of the unit, be held there for <math>3 \pm 1</math> sec and then be stored at room temperature for 1 to 2 hours. The <math>\Delta V_{cmA}</math> and mechanical damage shall be examined.</p> <p>or</p> <p>Each lead shall be dipped into a solder bath having a temperature of <math>260 \pm 10^\circ\text{C}</math> to a point 2.0 to 2.5 mm from the body of the unit, be held there for <math>10 \pm 1</math> sec and then be stored at room temperature for 1 to 2 hours. The <math>\Delta V_{cmA}</math> and mechanical damage shall be examined.</p>			$\Delta V_{cmA} \leq \pm 5\%$ No remarkable damage												
Solderability	<p>Each lead shall be dipped into a methanol solution (about 25%) of rosin for 5 to 10 sec. Then each lead shall be dipped into a solder.</p> <table border="1"><tr><td>Solder</td><td>Pb free (Sn-3.0Ag-0.5Cu)</td><td>Eutectic (Sn/Pb)</td></tr><tr><td>Solder Temp.</td><td><math>245 \pm 5^\circ\text{C}</math></td><td><math>235 \pm 5^\circ\text{C}</math></td></tr><tr><td>Dipping Time</td><td colspan="2"><math>2 \pm 0.5</math> sec.</td></tr><tr><td>Dipping Depth</td><td colspan="2">1.5 to 2.0mm (from the body)</td></tr></table>			Solder	Pb free (Sn-3.0Ag-0.5Cu)	Eutectic (Sn/Pb)	Solder Temp.	$245 \pm 5^\circ\text{C}$	$235 \pm 5^\circ\text{C}$	Dipping Time	$2 \pm 0.5$ sec.		Dipping Depth	1.5 to 2.0mm (from the body)		At least, 95% of the leads shall be covered with solder uniformly.
Solder	Pb free (Sn-3.0Ag-0.5Cu)	Eutectic (Sn/Pb)														
Solder Temp.	$245 \pm 5^\circ\text{C}$	$235 \pm 5^\circ\text{C}$														
Dipping Time	$2 \pm 0.5$ sec.															
Dipping Depth	1.5 to 2.0mm (from the body)															
Lead Pull Strength	<p>Fix varistor body, and suspend specified weight toward direction of lead axis.</p> <table border="1"><tr><td>Type</td><td>Lead Diameter</td><td>Weight</td></tr><tr><td>5V, 7V, 9V</td><td>0.6mm</td><td>10N</td></tr><tr><td>10V, 12V, 14V, 20V</td><td>0.8mm</td><td>10N</td></tr></table>			Type	Lead Diameter	Weight	5V, 7V, 9V	0.6mm	10N	10V, 12V, 14V, 20V	0.8mm	10N	No abnormality such as disconnection. $\Delta V_{cmA} \leq \pm 5\%$			
Type	Lead Diameter	Weight														
5V, 7V, 9V	0.6mm	10N														
10V, 12V, 14V, 20V	0.8mm	10N														
Lead Bend Strength	<p>Fix varistor body vertically. Then suspend specified weight and bent the varistor body by <math>90^\circ</math>, and return it to the original position. Carry out the operation in the opposite direction and return the body to the original position.</p> <table border="1"><tr><td>Type</td><td>Lead Diameter</td><td>Weight</td></tr><tr><td>5V, 7V, 9V</td><td>0.6mm</td><td>5N</td></tr><tr><td>10V, 12V, 14V, 20V</td><td>0.8mm</td><td>5N</td></tr></table>			Type	Lead Diameter	Weight	5V, 7V, 9V	0.6mm	5N	10V, 12V, 14V, 20V	0.8mm	5N	The leads shall not disconnect, slacken and peel off.			
Type	Lead Diameter	Weight														
5V, 7V, 9V	0.6mm	5N														
10V, 12V, 14V, 20V	0.8mm	5N														
Vibration	<p>Mount varistor body on vibrator, and conduct the following vibration test.</p> <p>Peak-to-Peak amplitude : 1.5mm</p> <p>Vibration frequency range : 10Hz to 55Hz</p> <p>Sweeping time:</p> <p>Approximately one minute for <math>10\text{Hz} \rightarrow 55\text{Hz} \rightarrow 10\text{Hz}</math></p> <p>Direction and duration of vibration :</p> <p>Three directions of X, Y and Z. Two hours each.</p> <p>Six hours total.</p>			No remarkable appearance abnormality. $\Delta V_{cmA} \leq \pm 5\%$												

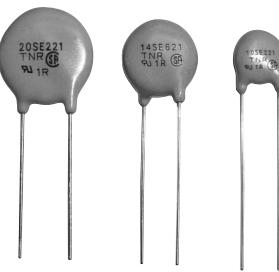

# METAL OXIDE VARISTORS TNR™

## SE Series

When the surge energy much higher than the rated maximum energy is applied to the varistors, it may blow up and catch fire.

TNR SE series is to prevent from being caught fire even very high surge energy is applied. Thus electric appliance using our TNR SE series can be much safer.

### ◆FEATURES

- Newly developed non-flammable material (Halogen Free) is used for outer coating.
- The new outer coating will meet UL flammability test.
- At the over voltage test, the new material shall deter burning caused by the high temperature, arc and the large surge current when TNR shall blow up.
- General specifications are same as that of V series, large surge capability TNR.
- Strong to thermal shock. (-40°C - 85°C, 50 cycles)
- UL, CSA and VDE recognized components

UL1449 3rd File : E323623

UL1414 File : E65426 (Except "12SE")

CSA File : LR97864

VDE File : 118623

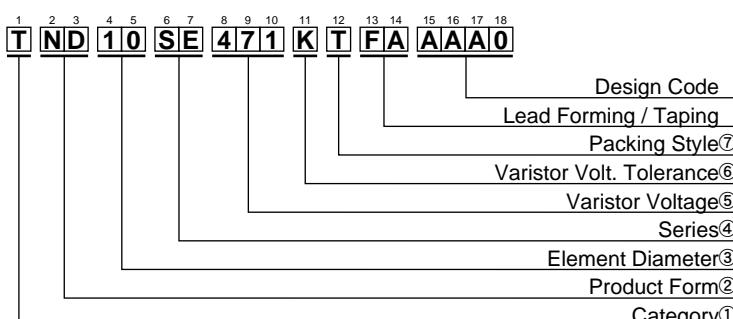

### ◆APPLICATIONS

- Protection for semiconductors from over voltage.
- Protection for electronic instruments from lightning surge.
- Absorption of on-off surge from motors and relays.

Operating Temperature Range: -40 to +85°C

Storage Temperature Range: -50 to +125°C

### ◆PART NUMBERING SYSTEM

## SE Series

## ◆GENERAL SPECIFICATIONS

Operating Temperature Range: -40 to +85°C  
Storage Temperature Range: -50 to +125°C

Item	Test Conditions	Specifications
<b>Standard Test Condition</b>	20±5°C, 65±20%RH unless specified. However, if it does not affect test result, the condition can be 20±15°C, 65±20%RH also.	
<b>Varistor Voltage</b>	The voltage between the two terminals measured at 1mA DC is called Varistor Voltage. The measurement shall be made as fast as possible to avoid heat affection.	Satisfy the specification
<b>Maximum Allowable Voltage</b>	Maximum continuous AC voltage (50 to 60Hz/AC) and maximum DC voltage which can be applied.	Satisfy the specification
<b>Maximum Peak Surge Current</b>	Maximum surge current (8/20μs pulse wave to be applied once, or twice, 2 minutes apart) for varistor voltage change within ±10% of the initial value.	Satisfy the specification
<b>Energy Rating</b>	Maximum energy (2ms square wave to be applied once) for varistor voltage change within ±10% of the initial value.	Satisfy the specification
<b>Rated Wattage</b>	Maximum power (50 to 60Hz/AC power to be applied for 1000 hours at 85±2°C) for varistor voltage change within ±10% of the initial value.	Satisfy the specification
<b>Maximum Clamping Voltage</b>	Maximum voltage across varistor when 8/20μs rated current surge is applied.	Satisfy the specification
<b>Capacitance</b>	Varistor's capacitance at 1kHz, standard test condition.	For reference only.
<b>Voltage Temperature Coefficient</b>	$\frac{V1mA \text{ at } 85^\circ\text{C} - V1mA \text{ at } 25^\circ\text{C}}{V1mA \text{ at } 25^\circ\text{C}} \times \frac{1}{60} \times 100 \text{ (%/°C)}$ V1mA : Actual Varistor Voltage	Within ±0.05%/°C
<b>Insulation</b>	Short circuit the two leads of varistor, and put the varistor body into metal balls (1.6mm diameter) leaving 2mm epoxy coating outside. Then, apply 2.5kVrms between the leads and the metal balls for 60±5 sec..	The varistor shall withstand with no abnormality.

## ◆ENVIRONMENTAL CHARACTERISTICS

Item	Test Conditions	Specifications
<b>High Temperature Storage (Dry heat)</b>	The specimen shall be subjected 125±2°C for 1000±12 hours without load.	$\Delta V1mA \leq \pm 5\%$
<b>Low Temperature Storage</b>	The specimen shall be subjected -40±2°C for 1000±12 hours without load.	$\Delta V1mA \leq \pm 5\%$
<b>Damp heat (Humidity)</b>	The specimen shall be subjected to 40±2°C, 90 to 95%RH for 1000±12 hours without load.	$\Delta V1mA \leq \pm 5\%$
<b>Temperature Cycle</b>	The temperature cycle shown below shall be repeated 50 cycles. -40±3°C, 30 minutes ↔ +85±2°C, 30 minutes	$\Delta V1mA \leq \pm 5\%$ $\Delta$ No remarkable damage
<b>High Temperature Operating</b>	The specimen shall be subjected to 85±2°C with the maximum allowable voltage for 1000±12 hours.	$\Delta V1mA \leq \pm 10\%$
<b>Damp heat Operating</b>	The specimen shall be subjected to 40±2°C, 90 to 95%RH with the maximum allowable voltage for 1000±12 hours.	$\Delta V1mA \leq \pm 10\%$

Varistor voltage change of forward direction shall be measured in the test of unipolar surge life and DC load life.

Varistor voltage change is measured after stored at Standard Test Conditions for 1 to 2 hours.

Note : For 42V battery line, please contact our sales office.

## SE Series

## ◆MECHANICAL CHARACTERISTICS

Item	Test Conditions	Specifications												
Resistance to Soldering Heat	Each lead shall be dipped into a solder bath having a temperature of $350 \pm 10^\circ\text{C}$ to a point 2.0 to 2.5 mm from the body of the unit, be held there for $3 \pm 1$ sec and then be stored at room temperature for 1 to 2 hours. The $\Delta V_{1mA}$ and mechanical damage shall be examined. or Each lead shall be dipped into a solder bath having a temperature of $260 \pm 10^\circ\text{C}$ to a point 2.0 to 2.5 mm from the body of the unit, be held there for $10 \pm 1$ sec and then be stored at room temperature for 1 to 2 hours. The $\Delta V_{1mA}$ and mechanical damage shall be examined.	$\Delta V_{1mA} \leq \pm 5\%$ No remarkable damage												
Solderability	Each lead shall be dipped into a methanol solution (about 25%) of rosin for 5 to 10 sec. Then each lead shall be dipped into a solder. <table border="1"><tr><td>Solder</td><td>Pb free (Sn-3.0Ag-0.5Cu)</td><td>Eutectic (Sn/Pb)</td></tr><tr><td>Solder Temp.</td><td><math>245 \pm 5^\circ\text{C}</math></td><td><math>235 \pm 5^\circ\text{C}</math></td></tr><tr><td>Dipping Time</td><td colspan="2"><math>2 \pm 0.5</math> sec.</td></tr><tr><td>Dipping Depth</td><td colspan="2">1.5 to 2.0mm (from the body)</td></tr></table>	Solder	Pb free (Sn-3.0Ag-0.5Cu)	Eutectic (Sn/Pb)	Solder Temp.	$245 \pm 5^\circ\text{C}$	$235 \pm 5^\circ\text{C}$	Dipping Time	$2 \pm 0.5$ sec.		Dipping Depth	1.5 to 2.0mm (from the body)		At least, 95% of the leads shall be covered with solder uniformly.
Solder	Pb free (Sn-3.0Ag-0.5Cu)	Eutectic (Sn/Pb)												
Solder Temp.	$245 \pm 5^\circ\text{C}$	$235 \pm 5^\circ\text{C}$												
Dipping Time	$2 \pm 0.5$ sec.													
Dipping Depth	1.5 to 2.0mm (from the body)													
Lead Pull Strength	Fix varistor body, and suspend specified weight toward direction of lead axis. <table border="1"><tr><td>Lead diameter</td><td>Force</td></tr><tr><td><math>\phi 0.6\text{mm}, \phi 0.8\text{mm}</math></td><td>10 N</td></tr></table>	Lead diameter	Force	$\phi 0.6\text{mm}, \phi 0.8\text{mm}$	10 N	No abnormality such as disconnection. $\Delta V_{1mA} \leq \pm 5\%$								
Lead diameter	Force													
$\phi 0.6\text{mm}, \phi 0.8\text{mm}$	10 N													
Lead Bend Strength	The varistor shall be secured with its terminal kept vertical and the force specified below shall be applied in the axial direction. The terminal shall gradually be bend by 90 in one direction then back to original position. The damage of the terminal shall be visually examined. <table border="1"><tr><td>Lead diameter</td><td>Force</td></tr><tr><td><math>\phi 0.6\text{mm}, \phi 0.8\text{mm}</math></td><td>2.5 N</td></tr></table>	Lead diameter	Force	$\phi 0.6\text{mm}, \phi 0.8\text{mm}$	2.5 N	No remarkable damage as remarkable the inner ceramic element or terminal open.								
Lead diameter	Force													
$\phi 0.6\text{mm}, \phi 0.8\text{mm}$	2.5 N													
Vibration	Mount varistor body on vibrator, and conduct the following vibration test. Peak-to-Peak amplitude : 1.5mm Vibration frequency range : 10 to 55Hz Sweeping time: Approximately one minute for 10Hz → 55Hz → 10Hz Direction and duration of vibration : Three directions of X, Y and Z. Two hours each. Six hours total.	No remarkable appearance abnormality. $\Delta V_{1mA} \pm 5\%$												
Flammability test	The varistor shall be subjected to 60 sec. applications of test flame. Burner : Bunsen gas burner 9000kcal / m <sup>3</sup> Diameter of flame nozzle : $\phi 9.5$ mm Position : The specimen shall be fixed horizontal. Point of application shall be approximately center of the specimen.	No catching fire, and no flaming drops.												

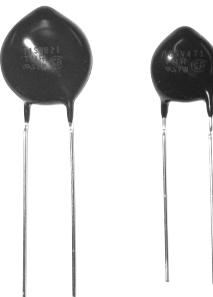

# METAL OXIDE VARISTORS TNR™

## SV Series

Our newly developed TNR SV series is to prevent from being caught fire even very high surge energy is applied.

Thus electric appliance using TNR SV series can be much safer like TNR SE series.

### ◆FEATURES

- Coating resin is highly non-flammability.
- Coating resin doesn't burn under the flammability test of UL.
- Little scatter at the destruction under over voltage.
- Pb free for RoHS directives.
- Halogen free (Coating resin doesn't contain Halogen).
- Strong to thermal shock (-40°C -85°C, 100 cycles).
- UL, CSA and VDE recognized components  
UL1449 3rd File : E323623  
UL1414 File : E65426 (Except "12SV")  
CSA File : LR97864  
VDE File : 118623

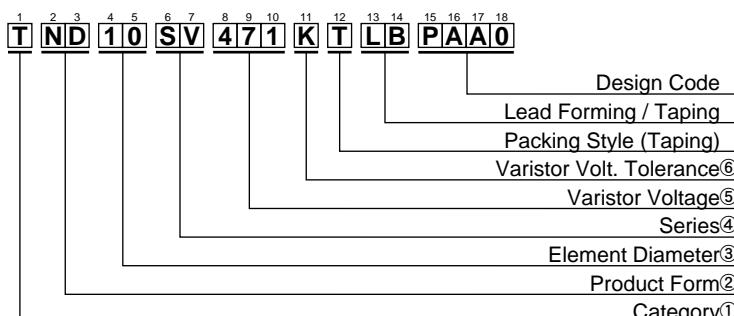

### ◆APPLICATIONS

- Protection for semiconductors from over voltage.
- Protection for electronic instruments from lightning surge.
- Absorption of on-off surge from motors and relays.

Operating Temperature Range: -40 to +85°C

Storage Temperature Range: -50 to +125°C

### ◆PART NUMBERING SYSTEM

①Category	
T	Metal Oxide Varistors TNR

②Product Form	
ND	Disk Type

③Element Diameter	
10	φ10 mm
12	φ12 mm
14	φ14 mm

④Series	
SV	SV Series

⑤Varistor Voltage	
The first two digits are significant figures and the third one denotes the number of following zeros.	

⑥Varistor Volt. Tolerance	
K	±10%

### ◆CAUTIONS and WARNINGS

Varistors may be short-circuit or be destroyed, in case of absorbing over rating voltage or over rating surge.  
Please connect a current fuse less than 7A rating or a circuit breaker in series with varistors.

# SV Series

## ◆GENERAL SPECIFICATIONS

Operating Temperature Range: -40 to +85°C  
Storage Temperature Range: -50 to +125°C

Item	Test Conditions	Specifications
<b>Standard Test Condition</b>	20±5°C, 65±20%RH unless specified. However, if it does not affect test result, the condition can be 20±15°C, 65±20%RH also.	
<b>Varistor Voltage</b>	The voltage between the two terminals measured at 1mA DC is called Varistor Voltage. The measurement shall be made as fast as possible to avoid heat affection.	Satisfy the specification
<b>Maximum Allowable Voltage</b>	Maximum continuous AC voltage (50 to 60Hz/AC) and maximum DC voltage which can be applied.	Satisfy the specification
<b>Maximum Peak Surge Current</b>	Maximum surge current (8/20μs pulse wave to be applied once, or twice, 2 minutes apart) for varistor voltage change within ±10% of the initial value.	Satisfy the specification
<b>Energy Rating</b>	Maximum energy (2ms square wave to be applied once) for varistor voltage change within ±10% of the initial value.	Satisfy the specification
<b>Rated Wattage</b>	Maximum power (50 to 60Hz/AC power to be applied for 1000 hours at 85±2°C) for varistor voltage change within ±10% of the initial value.	Satisfy the specification
<b>Maximum Clamping Voltage</b>	Maximum voltage across varistor when 8/20μs rated current surge is applied.	Satisfy the specification
<b>Capacitance</b>	Varistor's capacitance at 1kHz, standard test condition.	For reference only.
<b>Voltage Temperature Coefficient</b>	$\frac{V1mA \text{ at } 85^\circ\text{C} - V1mA \text{ at } 25^\circ\text{C}}{V1mA \text{ at } 25^\circ\text{C}} \times \frac{1}{60} \times 100 \text{ (%/°C)}$ V1mA : Actual Varistor Voltage	Within ±0.05%/°C
<b>Insulation</b>	Short circuit the two leads of varistor, and put the varistor body into metal balls (1.6mm diameter) leaving 2mm epoxy coating outside. Then, apply 2.5kVrms between the leads and the metal balls for 60±5 sec..	The varistor shall withstand with no abnormality.

## ◆ENVIRONMENTAL CHARACTERISTICS

Item	Test Conditions	Specifications
<b>High Temperature Storage (Dry heat)</b>	The specimen shall be subjected 125±2°C for 1000±12 hours without load.	$\Delta V1mA \leq \pm 5\%$
<b>Low Temperature Storage</b>	The specimen shall be subjected -40±2°C for 1000±12 hours without load.	$\Delta V1mA \leq \pm 5\%$
<b>Damp heat (Humidity)</b>	The specimen shall be subjected to 40±2°C, 90 to 95%RH for 1000±12 hours without load.	$\Delta V1mA \leq \pm 5\%$
<b>Temperature Cycle</b>	The temperature cycle shown below shall be repeated 100 cycles. -40±3°C, 30 minutes ↔ +85±2°C, 30 minutes	$\Delta V1mA \leq \pm 5\%$ $\Delta$ No remarkable damage
<b>High Temperature Operating</b>	The specimen shall be subjected to 85±2°C with the maximum allowable voltage for 1000±12 hours.	$\Delta V1mA \leq \pm 10\%$
<b>Damp heat Operating</b>	The specimen shall be subjected to 40±2°C, 90 to 95%RH with the maximum allowable voltage for 1000±12 hours	$\Delta V1mA \leq \pm 10\%$

Varistor voltage change of forward direction shall be measured in the test of unipolar surge life and DC load life.

Varistor voltage change is measured after stored at Standard Test Conditions for 1 to 2 hours.

Note : For 42V battery line, please contact our sales office.

## SV Series

## ◆MECHANICAL CHARACTERISTICS

Item	Test Conditions	Specifications												
Resistance to Soldering Heat	Each lead shall be dipped into a solder bath having a temperature of $350 \pm 10^\circ\text{C}$ to a point 2.0 to 2.5 mm from the body of the unit, be held there for $3 \pm 1$ sec and then be stored at room temperature for 1 to 2 hours. The $\Delta V_{1mA}$ and mechanical damage shall be examined. or Each lead shall be dipped into a solder bath having a temperature of $260 \pm 10^\circ\text{C}$ to a point 2.0 to 2.5 mm from the body of the unit, be held there for $10 \pm 1$ sec and then be stored at room temperature for 1 to 2 hours. The $\Delta V_{1mA}$ and mechanical damage shall be examined.	$\Delta V_{1mA} \leq \pm 5\%$ No remarkable damage												
Solderability	Each lead shall be dipped into a methanol solution (about 25%) of rosin for 5 to 10 sec. Then each lead shall be dipped into a solder. <table border="1"><tr><td>Solder</td><td>Pb free (Sn-3.0Ag-0.5Cu)</td><td>Eutectic (Sn/Pb)</td></tr><tr><td>Solder Temp.</td><td><math>245 \pm 5^\circ\text{C}</math></td><td><math>235 \pm 5^\circ\text{C}</math></td></tr><tr><td>Dipping Time</td><td colspan="2"><math>2 \pm 0.5</math> sec.</td></tr><tr><td>Dipping Depth</td><td colspan="2">1.5 to 2.0mm (from the body)</td></tr></table>	Solder	Pb free (Sn-3.0Ag-0.5Cu)	Eutectic (Sn/Pb)	Solder Temp.	$245 \pm 5^\circ\text{C}$	$235 \pm 5^\circ\text{C}$	Dipping Time	$2 \pm 0.5$ sec. **H Series****◆GENERAL SPECIFICATIONS**

Operating Temperature Range: -40 to +125°C  
 Storage Temperature Range: -50 to +150°C

Item	Test Conditions	Specifications
<b>Standard Test Condition</b>	Ambient temperature : 20±15°C Relative humidity : 65±20%RH  if there is any doubt about the results, measurement shall be made within the following limits.  Ambient temperature : 20±5°C Relative humidity : 65±20%RH	
<b>Varistor Voltage</b>	The voltage between the two terminals measured at 1mA DC is called Varistor Voltage. The measurement shall be made as fast as possible to avoid heat affection.	Satisfy the specification.
<b>Maximum Allowable Voltage</b>	Maximum continuous sinusoidal RMS voltage or Maximum continuous DC voltage which may be applied.	Refer to Ratings.
<b>Maximum applicable voltage for a short period (5 minutes)</b>	Maximum DC voltage to be applied for only 5 minutes.	Refer to Ratings.
<b>Maximum Clamping Voltage</b>	The maximum voltage between the terminals, measured standard impulse current (8/20 µs).	Satisfy the specification.
<b>Maximum Energy</b>	Maximum energy within the ±10% varistor voltage change when 1 impulse 20 ms long is applied.	Satisfy the specification.
<b>Temperature Coefficient</b>	$\frac{V1mA \text{ at } 85^\circ\text{C} - V1mA \text{ at } 25^\circ\text{C}}{V1mA \text{ at } 25^\circ\text{C}} \times \frac{1}{60} \times 100 \text{ (%/}^\circ\text{C)}$	Within $\pm 0.05 \text{ % / }^\circ\text{C}$

**◆MECHANICAL CHARACTERISTICS**

Item	Test Conditions	Specifications												
<b>Terminal Pull Strength</b>	After gradually applying the force keeping the unit fixed for 10±1 sec. in axial direction, the damage of the terminals shall be visually examined.  <table style="margin-left: auto; margin-right: auto;"> <tr> <td>Lead diameter</td> <td>Force</td> </tr> <tr> <td>ϕ0.6mm. ϕ0.8mm</td> <td>10 N</td> </tr> </table>	Lead diameter	Force	ϕ0.6mm. ϕ0.8mm	10 N	$\Delta V1mA \leq \pm 5\%$ No remarkable damage								
Lead diameter	Force													
ϕ0.6mm. ϕ0.8mm	10 N													
<b>Terminal Bending Strength</b>	The unit shall be secured with its terminal kept vertical and the weight specified below be applied in the axial direction. The terminal shall gradually be bend by 90° in one direction then 90° in the opposite direction, and again back to original position. The damage of the terminal shall be visually examined.  <table style="margin-left: auto; margin-right: auto;"> <tr> <td>Lead diameter</td> <td>Force</td> </tr> <tr> <td>ϕ0.6mm. ϕ0.8mm</td> <td>5 N</td> </tr> </table>	Lead diameter	Force	ϕ0.6mm. ϕ0.8mm	5 N	No remarkable damage								
Lead diameter	Force													
ϕ0.6mm. ϕ0.8mm	5 N													
<b>Vibration</b>	After repeatedly applying a single harmonic vibration (amplitude : 0.75mm) double amplitude : 1.5mm with 1 minute vibration frequency cycle (10Hz→500Hz→10Hz) to each three perpendicular directions for 2 hours. Total 6 hours. The devices shall be visually examined.	$\Delta V1mA \leq \pm 5\%$ No remarkable damage												
<b>Resistance to Soldering Heat</b>	Each lead shall be dipped into a solder bath having a temperature of 350±10°C to a point 2.0 to 2.5 mm from the body of the unit, be held there for 3 <sup>±1</sup> sec and then be stored at room temperature for 1 to 2 hours. The ΔV1mA and mechanical damage shall be examined. or Each lead shall be dipped into a solder bath having a temperature of 260±10°C to a point 2.0 to 2.5 mm from the body of the unit, be held there for 10±1 sec and then be stored at room temperature for 1 to 2 hours. The ΔV1mA and mechanical damage shall be examined.	$\Delta V1mA \leq \pm 5\%$ No remarkable damage												
<b>Solderability</b>	Each lead shall be dipped into a methanol solution (about 25%) of rosin for 5 to 10 sec. Then each lead shall be dipped into a solder. <table style="margin-left: auto; margin-right: auto;"> <tr> <td>Solder</td> <td>Pb free (Sn-3.0Ag-0.5Cu)</td> <td>Eutectic (Sn/Pb)</td> </tr> <tr> <td>Solder Temp.</td> <td>245±5°C</td> <td>235±5°C</td> </tr> <tr> <td>Dipping Time</td> <td>2±0.5sec.</td> <td></td> </tr> <tr> <td>Dipping Depth</td> <td>1.5 to 2.0mm (from the body)</td> <td></td> </tr> </table>	Solder	Pb free (Sn-3.0Ag-0.5Cu)	Eutectic (Sn/Pb)	Solder Temp.	245±5°C	235±5°C	Dipping Time	2±0.5sec.		Dipping Depth	1.5 to 2.0mm (from the body)		At least, 95% of the leads shall be covered with solder uniformly.
Solder	Pb free (Sn-3.0Ag-0.5Cu)	Eutectic (Sn/Pb)												
Solder Temp.	245±5°C	235±5°C												
Dipping Time	2±0.5sec.													
Dipping Depth	1.5 to 2.0mm (from the body)													

# H Series

## ◆ENVIRONMENTAL CHARACTERISTICS

Item	Test Conditions	Specifications
High Temperature Storage (Dry heat)	The specimen shall be subjected $150 \pm 2^\circ\text{C}$ for $1000 \pm 12$ hours without load.	$\Delta V1mA \leq \pm 10\%$
Low Temperature Storage	The specimen shall be subjected $-40 \pm 2^\circ\text{C}$ for $1000 \pm 12$ hours without load.	$\Delta V1mA \leq \pm 5\%$
Damp heat (Humidity)	The specimen shall be subjected to $60 \pm 2^\circ\text{C}$ , 90 to 95%RH for $1000 \pm 12$ hours without load.	$\Delta V1mA \leq \pm 10\%$
Temperature Cycle	The temperature cycle shown below shall be repeated 50 cycles. $-40 \pm 3^\circ\text{C}$ , 30 minutes $\leftrightarrow +150 \pm 2^\circ\text{C}$ , 30 minutes	$\Delta V1mA \leq \pm 10\%$ $\Delta$ No remarkable damage
High Temperature Operating	The specimen shall be subjected to $125 \pm 2^\circ\text{C}$ with the maximum allowable voltage for $1000 \pm 12$ hours.	$\Delta V1mA \leq \pm 20\%$
Damp heat Operating	The specimen shall be subjected to $60 \pm 2^\circ\text{C}$ , 90 to 95%RH with the maximum allowable voltage for $1000 \pm 12$ hours.	$\Delta V1mA \leq \pm 10\%$

Varistor voltage change of forward direction shall be measured in the test of unipolar surge life and DC load life.

Varistor voltage change is measured after stored at Standard Test Conditions for 1 to 2 hours.

Note : For 42V battery line, please contact our sales office.

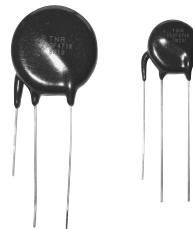

# METAL OXIDE VARISTORS TNR™

## GF Series

GF Series are combined TNR G Series with Thermal Fuse

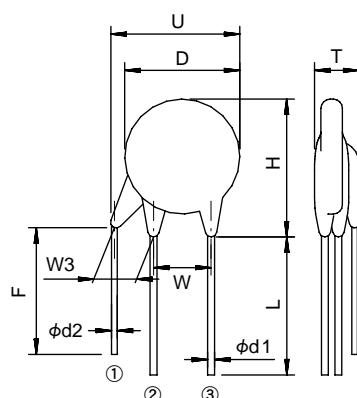

Operating Temperature Range: -40 to +85°C

**E Series**RoHS  
Compliant**◆FEATURES**

- Excellent clamping voltage characteristic and fast response time (<50 ns) when subjected to impulse surges.
- No follow current.
- Any voltage rating within a V1mA range from 200 to 1,100V available. (V1mA : varistor voltage.)
- Bilateral and symmetrical V-I characteristics curve.
- The TNR can, therefore, be used both in AC and DC circuits, for protection of either positive or negative transients.
- Large withstanding peak current 8,000 to 25,000A(8/20μs).

**◆APPLICATIONS**

- Protection of semiconductors such as transistors, diodes, ICs, thyristors, triacs, etc.
- Protection of various equipment including:
  - \* Broadcasting, communications equipment.
  - \* Traffic and railway signal systems.
  - \* Automatic control devices for power distribution.
  - \* Waterworks.
  - \* Home entertainment equipment.
- Surge absorption of relays and electromagnetic valves.
- Absorption of surges generated within equipment such as TVs.

●TNB32E-221K~112K

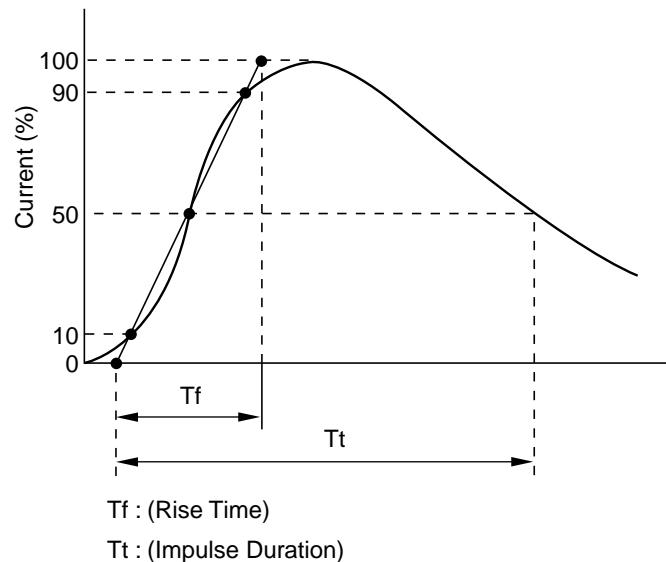

## PULSE LIFE TIME RATINGS

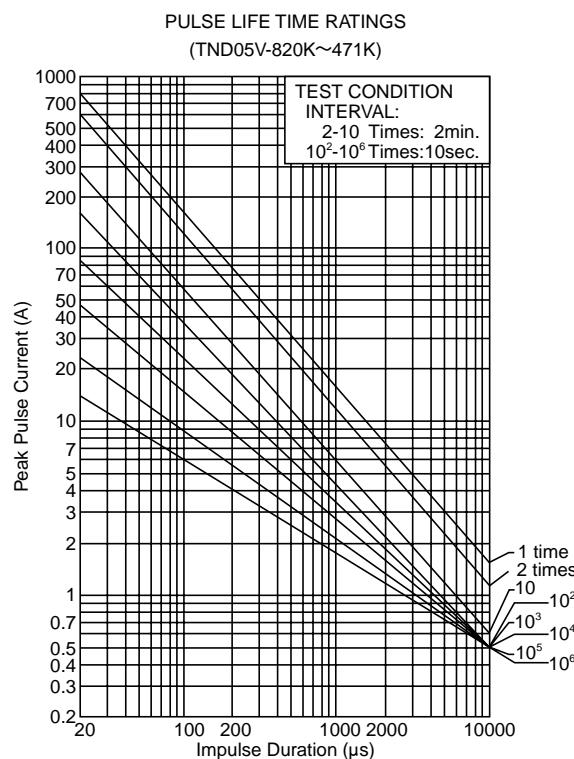

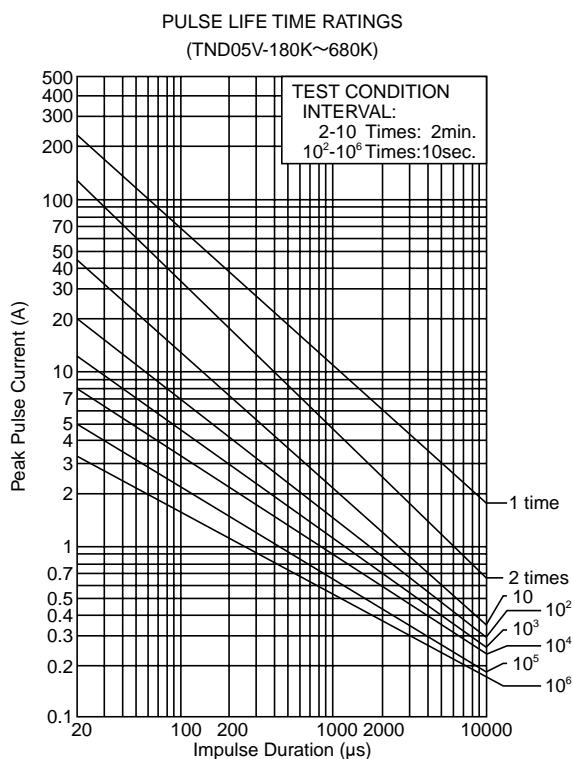

When the following factors are different from the specified conditions,  
the peak pulse current should be revised based on the PULSE LIFE TIME RATINGS.

- Impulse duration time
- Number of impulse

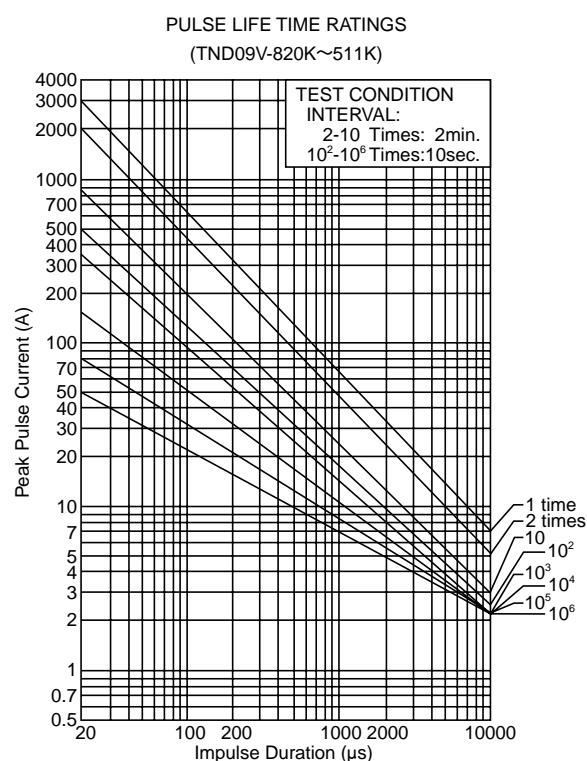

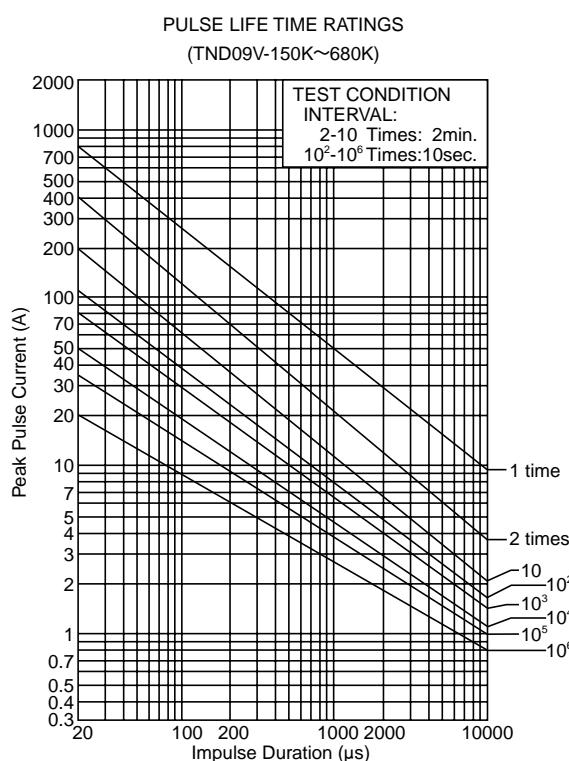

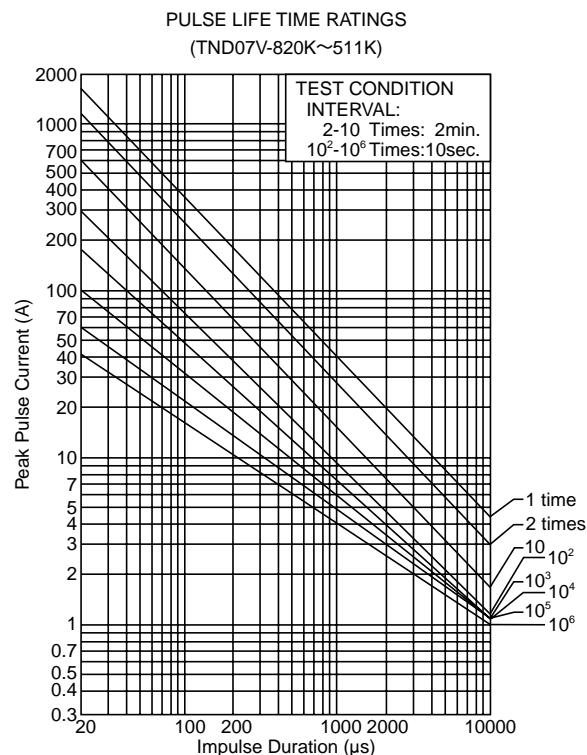

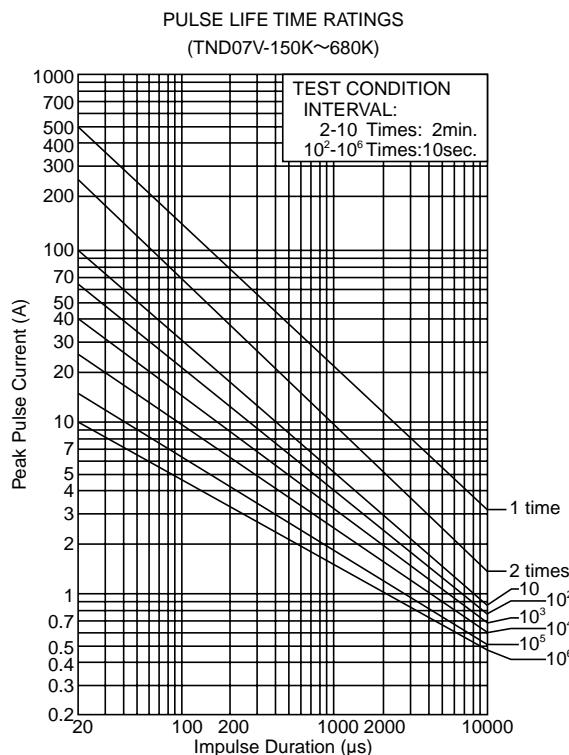

(Impulse Current Wave Form)
