

电感式接近开关工作原理

Working principle of inductive proximity switch

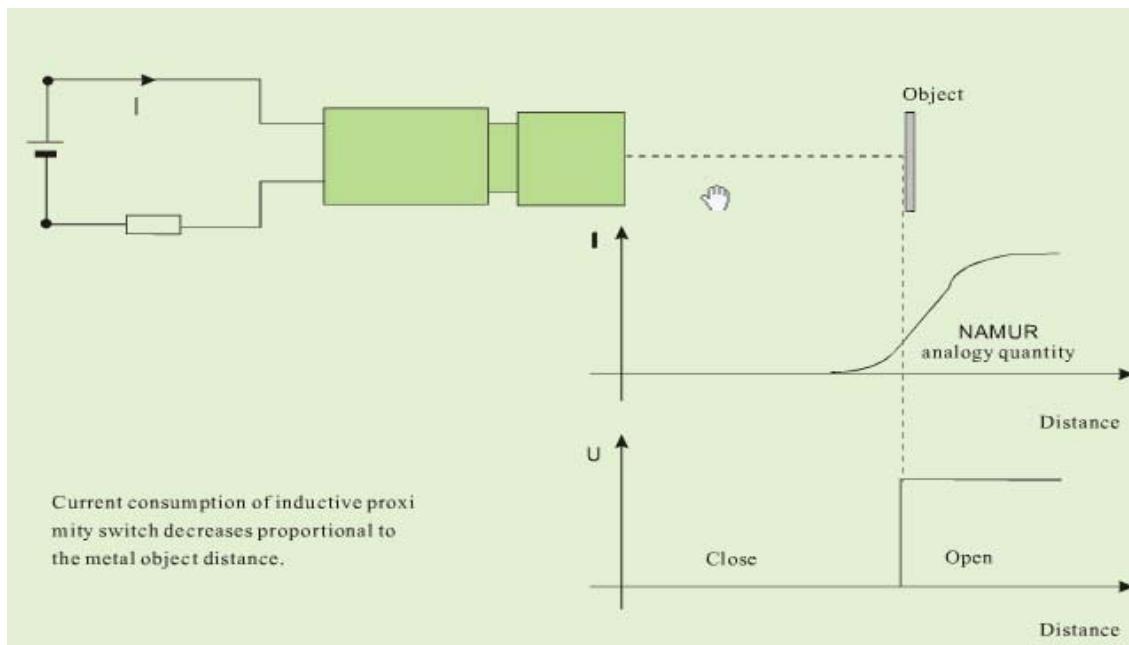

电感式接近开关由三大部分组成：振荡器、开关电路及放大输出电路。振荡器产生一个变交磁场，并达到感应距离时，在金属目标内产生涡流，从而导致振荡衰减，以至停振。

振荡器振荡及停振的变化被后级放大电路处理并转换成开关信号，触发驱动控制器件，从而达到非接触式之检测目的。

目标离传感器越近，线圈内的阻尼就越大，阻尼越大，传感器振荡器的电流越小。

Inductive proximity switch is composed of three parts: oscillator, switch circuit and magnified output circuit. The oscillator will generate an alternating electric field. When the metal object approaches this electric field and reaches the induction distance, whirlpool will generate in metal object, resulting in attenuation of vibration and then stop. The change of vibration and stop of oscillator is treated by behind stage magnified circuit and converted to switching sign, triggering driving control for non-contact detection.

■ 舌簧传感器 reed sensor

舌簧传感器又称磁性开关，适用与气动、液动、气缸和活塞泵的位置测定亦可作限位开关用。当磁性目标接近时，舌簧闭合经放大输出开关信号。与电感式传感器比较有以下优点，能安装在金属中可排紧密安装，可穿过金属进行检测。其检测距离随检测体磁场的强弱的变化而变化。舌簧传感器不适合用于强烈震动的场合。

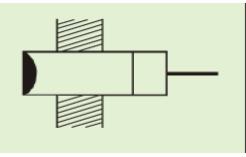

Also called magnetic switch, reed sensor is applicable for position determination of pneumatic and/or hydraulic cylinder and piston pump. It also can be used as limit switch. When the magnetic object approaches, the reed closes and sends out switch signal through magnification. Compared with inductive sensor, it has the following strong points: can be installed in metal closely and side by side and detect through metal object. Its detection distance subjects to the intensity of magnetic field of detected object. Reed sensor is not applicable in the occasion of severe vibration.

一、概述

固态继电器英文名称为 Solid state relay, 简称 SSR, 我公司生产的 ZG3 系列 SSR 是采用国外先进技术和元器件制造的一种开关性能优良的新型无触点电子开关器件。它的输入端仅要求输入很小的控制电流, 能与 TTL、HTL、CMOS 等集成电器较好的兼容, 而输出回路则采用双向可控制硅或大功率晶体管接通和断开负载电流。输入与输出之间采用光电耦合。

由于固态继电器是由固体元件组成的无触点开关元件, 所以它较之电磁继电器具有工作可靠, 寿命长, 对外界干扰小, 抗干扰能力强, 开关速度快, 使用方便等一系列优点。它有很宽广的应用领域, 有逐步取代传统的电磁继电器之势, 并且进一步扩展到传统的电磁继电器无法应用的领域, 如计算机和可编程序控制器的输入输出接口, 电炉加热恒温设备, 数控机械, 遥控系统, 工业自动化装置, 信号灯, 交通灯, 照明舞台灯光控制设备, 仪器仪表, 医疗器械, 复印机, 彩扩机, 橡塑机械, 在一些要求耐潮、防爆防腐蚀的特殊装置和恶劣的工作环境中以及要求工作高可靠的场合中, SSR 都较之传统的电磁继电器有无可比拟的优越性。它是继电器家族 (EMR) 的理想更新换代产品。

1、DESCRIPTON

Solid state relay is called "SSR" for. ZG3 series product made by our factory is the latest non-contact electronic switch device with good ON-OFF performance. Its input end only requires tiny control current and can be compatible with integrated circuit of TTL and CMOS, etc. The output return circuit adopts two way controlled silicon or big power transistor to cut on or cut off the loading current. The photoelectric coupler is adopted between the input and output.

Because solid state relay is a non-contact switch element made up of solid state elements. Compared with electromagnetic relay, it is more reliable. It has series advantages, such as long service life, little disturbance to surrounding and strong anti-interference performance, etc. it has wide application fields. And it tends to replace the traditional electromagnetic relay and further expands to the fields which traditional electromagnetic relay is not applicable for, like input/output interface of computer and program control, electric stove heating constant temperature equipment, digital control machine, remote control system, industrial automatic device, signal lamp, traffic lamp, stage lighting control equipment, instrument and meter, medical equipment, duplicator, color enlarger, and rubber & plastic machine, etc. in some special devices which require damp proof, fireproof and anti-corrosion, and under bad working environment, SSR has incomparable superiority in comparison with tradition with tradition electromagnetic relay. It is an ideal product to replace the older generations of products in relay family (EMR).

使用注意事项 Cautions while using

- 过流和负载是造成 SSR 永久性损坏的主要原因。快速熔断器的过流保护方法之一。小容量也可选用保险丝。过压的保护除 SSR 内部有 RC 吸收回路外, 还可以采用并联金属氧化物压敏电阻 (MOV), MOV 面积大小决定吸收功率, MOV 的厚度决定保护电压值。一般 220V 系列 SSR 可选取 500-630VDC 的压敏电阻, 380V 系列 SSR 可选取 700-900VDC 的压敏电阻。
- 环境温度过高时, SSR 的负载能力随之下降, 如使用环境温度较高或散热条件不佳时, 选用的 SSR 必须留有一定的余量。
- 电阻性负载不能超过额定电流的 60%, 电感性负载不能超过额定电流的 40%。
- Over-current and loading short circuit result in SSR permanent damage. Quick fuse is one of the over-current protection methods. Small capacity may also adopt fuse. Over-voltage protection adopts parallel connection metal oxide varistor (MOV) as well as RC absorbing return inside SSR. The area size of MOV determines the absorbing power. The thickness of MOV determines protective voltage value. Generally, 220V series SSR may choose varistor of 500-630 VDC, 380V series SSR may choose varistor of 700-900VDC.
- If ambient temperature is too high, the loading capacity of SSR will descend. If the ambient temperature is high or the heat radiation is bad, the chosen SSR should be kept a certain margin.
- The resistance load should not surpass 60% of rated current. The inductance load should not surpass 40% of rated current.
