3. Absolute Maximum Ratings(Ta=25℃)

Item	Symbol	Min.	Max.	Unit	Remark
Analog power supply	V_{CI}	-0.3	+4.6	V	
Logic input voltage	V_{DD}	-0.3	+4.6	V	
Operating temperature (Ambient)	T_{opr}	-20	+60	℃	
Storage temperature (Ambient)	T_{stg}	-30	+70	℃	

Note 1: If the module exceeds the absolute maximum ratings, it may be damaged permanently.
Also, if the module operates with the absolute maximum ratings for a long time, the reliability may drop.

Note 2: All the measurements should be operated with driver IC and experimental FPC mounted.

4. Electrical Specifications and Instruction Code
4.1 Electrical characteristics (Ta=25℃)

Parameter		Symbol	Condition	Min	Typ	Max	Unit	Note
Logic Power supply		VDD	Ta=25℃	2.5	2.8	3.3	V	1
Input Voltage	H	V_{IH}		$0.8V_{DD}$	-	V_{DD}	V	
	L	V_{IL}		0	0	$0.2V_{DD}$	V	
Output Voltage	H	V_{OH}	I_{OH} = -1.0mA	$0.8V_{DD}$	-	-	V	
	L	V_{OL}	I_{OL} = +1.0mA	-	-	$0.2V_{DD}$	V	
Current Consumption		I_{CC1}	Normal mode	18		23	mA	2
		I_{CC2}	Stand-by mode	-	-	-	mA	3

Note 1: The operations are guaranteed under the recommended operating conditions only. These operations are not guaranteed if a quick voltage change occurs during operation. To prevent noise, a bypass capacitor must be inserted into the line close to the power pin.

Note 2: All the measurements should be operated with driver IC and experimental FPC.

6. Precautions for Use of LCD Modules

6.1 Handling Precautions

6.1.1 The display panel is made of glass. Do not subject it to a mechanical shock by dropping it from a high place, etc.

6.1.2 If the display panel is damaged and the liquid crystal substance inside it leaks out, be sure not to get any in your mouth, if the substance comes into contact with your skin or clothes, promptly wash it off using soap and water.

6.1.3 Do not apply excessive force to the display surface or the adjoining areas since this may cause the color tone to vary.

6.1.4 The polarizer covering the display surface of the LCD module is soft and easily scratched. Handle this polarizer carefully.

6.1.5 If the display surface is contaminated, breathe on the surface and gently wipe it with a soft dry cloth. If still not completely clear, moisten cloth with one of the following solvents:

— Isopropyl alcohol

— Ethyl alcohol

Solvents other than those mentioned above may damage the polarizer.

Especially, do not use the following:

— Water

— Ketone

— Aromatic solvents

6.1.6 Do not attempt to disassemble the LCD Module.

6.1.7 If the logic circuit power is off, do not apply the input signals.

6.1.8 To prevent destruction of the elements by static electricity, be careful to maintain an optimum work environment.

a. Be sure to ground the body when handling the LCD Modules.

b. Tools required for assembly, such as soldering irons, must be properly ground.

c. To reduce the amount of static electricity generated, do not conduct assembly and other work under dry conditions.

d. The LCD Module is coated with a film to protect the display surface. Be care when peeling off this protective film since static electricity may be generated.

6.2 Storage precautions

6.2.1 When storing the LCD modules, avoid exposure to direct sunlight or to the light of fluorescent lamps.

6.2.2 The LCD modules should be stored under the storage temperature range. If the LCD modules will be stored for a long time, the recommend condition is:

Temperature :   0℃ ∼   40℃

Relatively humidity: ≤80%

6.2.3 The LCD modules should be stored in the room without acid, alkali and harmful gas.

6.3 The LCD modules should be no falling and violent shocking during transportation, and also should avoid excessive press, water, damp and sunshine.
