

GaAs MMIC Control FET in SOT 143 DC–2.5 GHz

AF002C1–32

Features

- Low Cost
- Small SOT 143 Package
- Series or Shunt Configuration
- Low DC Current Drain
- Ideal Switch Building Block

Description

The AF002C1–32 consists of a single GaAs switching FET that can be used in both series and shunt configurations. A positive control voltage may be used by simply adding 3 DC blocking capacitors.

Isolation performance degrades at higher frequencies due to package parasitics. These parasitics can be tuned out in narrow band applications as shown in a AF002C1–39 data sheet.
