MAXIM*Precision, Quad, SPST Analog Switches**General Description*

The MAX351/MAX352/MAX353 are precision, quad, single-pole single-throw (SPST) analog switches. The MAX351 has four normally closed (NC), and the MAX352 has four normally open (NO) switches. The MAX353 has two NO and two NC switches. All three parts offer low on resistance (less than 35Ω), guaranteed to match within 2Ω between channels and to remain flat over the analog signal range ($\Delta 3\Omega$ max). They also offer low leakage (less than 250pA at $+25^\circ\text{C}$ and less than 6nA at $+85^\circ\text{C}$) and fast switching (turn-on time less than 175ns and turn-off time less than 145ns).

The MAX351/MAX352/MAX353 are fabricated with Maxim's new improved 44V silicon-gate process. Design improvements guarantee extremely low charge injection (10pC), low power consumption ($35\mu\text{W}$), and electrostatic discharge (ESD) greater than 2000V. The 44V maximum breakdown voltage allows rail-to-rail analog signal handling.

These monolithic switches operate with a single positive supply ($+10\text{V}$ to $+30\text{V}$) or with split supplies ($\pm 4.5\text{V}$ to $\pm 20\text{V}$) while retaining CMOS-logic input compatibility and fast switching. CMOS inputs provide reduced input loading.

Applications

Sample-and-Hold Circuits	Military Radios
Guidance and Control Systems	Communications Systems
Heads-Up Displays	Battery-Operated Systems
Test Equipment	PBX, PABX

Features

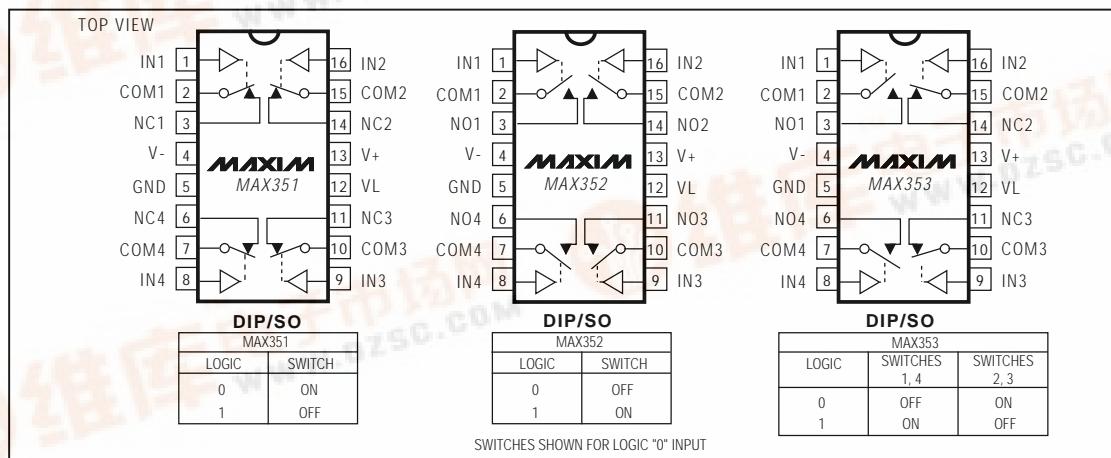

- ♦ Low On Resistance $< 22\Omega$ Typical (35Ω Max)
- ♦ Guaranteed Matched On Resistance Between Channels $< 2\Omega$
- ♦ Guaranteed Flat On Resistance Over Analog Signal Range $\Delta 3\Omega$ Max
- ♦ Guaranteed Charge Injection $< 10\text{pC}$
- ♦ Guaranteed Off-Channel Leakage $< 6\text{nA}$ at $+85^\circ\text{C}$
- ♦ ESD Guaranteed $> 2000\text{V}$ per Method 3015.7
- ♦ Single-Supply Operation ($+10\text{V}$ to $+30\text{V}$) Bipolar-Supply Operation ($\pm 4.5\text{V}$ to $\pm 20\text{V}$)
- ♦ TTL-/CMOS-Logic Compatibility
- ♦ Rail-to-Rail Analog Signal Handling Capability

Precision, Quad, SPST Analog Switches

ABSOLUTE MAXIMUM RATINGS

Voltage Referenced to V-	
V+	44V
GND	25V
VL	(GND - 0.3V) to (V+ + 0.3V)
Digital Inputs, VCOM, VNC, VNO (Note 1)	(V- - 2V) to (V+ + 2V)or 30mA (whichever occurs first)
Current (any terminal)	30mA
Peak Current COM_, NO_, NC_ (pulsed at 1ms, 10% duty cycle max)	100mA
ESD per Method 3015.7	>2000V

Continuous Power Dissipation (TA = +70°C) (Note 2)

Plastic DIP (derate 10.53mW/°C above +70°C)	842mW
Narrow SO (derate 8.70mW/°C above +70°C)	696mW
CERDIP (derate 10.00mW/°C above +70°C)	800mW

Operating Temperature Ranges:

MAX35_C_	0°C to +70°C
MAX35_E_	-40°C to +85°C
MAX35_MJE	-55°C to +125°C

Storage Temperature Range

Lead Temperature (soldering, 10sec)

+300°C

Note 1: Signals on NC_, NO_, COM_, or IN_ exceeding V+ or V- will be clamped by internal diodes. Limit forward diode current to maximum current rating.

Note 2: All leads are soldered or welded to PC board.

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

ELECTRICAL CHARACTERISTICS—Dual Supplies

(V+ = 15V, V- = -15V, VL = 5V, GND = 0V, VINH = 2.4V, VINL = 0.8V, TA = TMIN to TMAX, unless otherwise noted.)

Note 3: The algebraic convention, where the most negative value is a minimum and the most positive value a maximum, is used in this data sheet.

Note 4: Guaranteed by design.

Note 5: $\Delta R_{ON} = \Delta R_{ON\ max} - \Delta R_{ON\ min}$. On-resistance match between channels and flatness are guaranteed only with bipolar-supply operation.

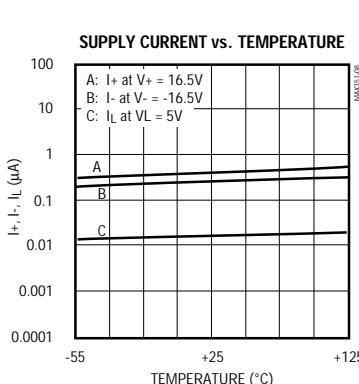

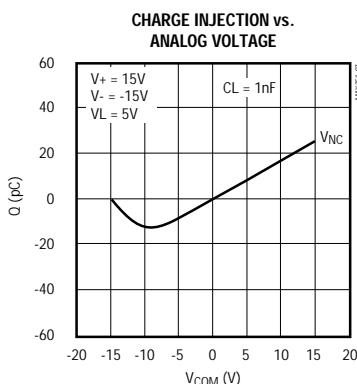

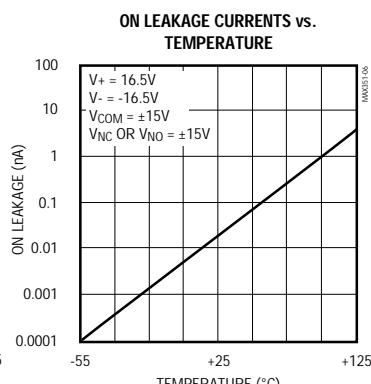

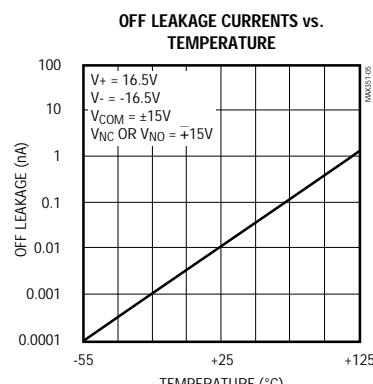

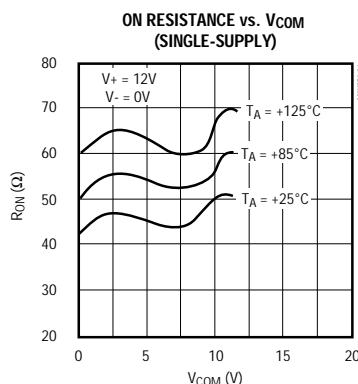

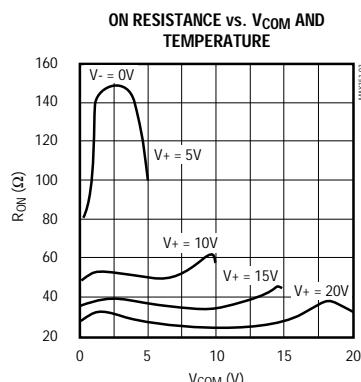

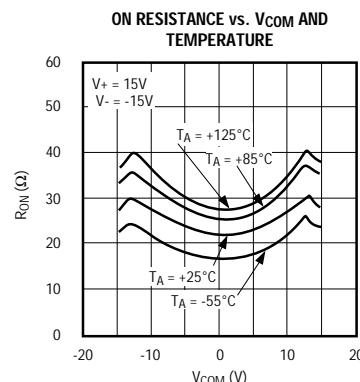

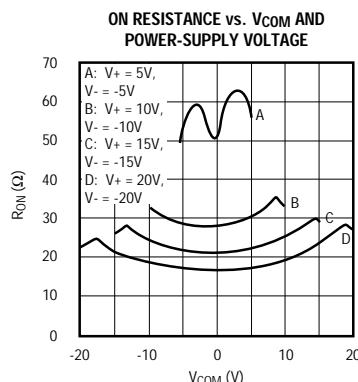

Note 6: See Figure 5. Off Isolation = $20 \log_{10} [V_{COM} / (V_{NC} \text{ or } V_{NO})]$, V_{COM} = output, V_{NC} or V_{NO} = input to off switch.

Note 7: Between any two switches. See Figure 6.

4	V-	Negative Supply-Voltage Input
5	GND	Ground
12	VL	Logic Supply Voltage
13	V+	Positive Supply-Voltage Input—connected to substrate

Applications Information

Operation with Supplies Other than $\pm 15V$
The main limitation of supply voltages other than $\pm 15V$ is reduced analog-signal range. The MAX351/MAX352/MAX353 operate with $\pm 5V$ to $\pm 20V$ bipolar supplies. The *Typical Operating Characteristics* graphs show typical on resistance (R_{ON}) for $\pm 15V$, $\pm 10V$, and $\pm 5V$ supplies. (Switching times increase by a factor of two or more for operation at $\pm 5V$.) The MAX351/MAX352/MAX353 can operate from $+10V$ to $+30V$ unipolar supplies. Each device can also be powered from unbalanced supplies such as $+24V$ and $-5V$. Connect V- to 0V when operating with a single supply. VL must be connected to $+5V$ to be TTL compatible or to V+ for CMOS-logic input levels.

Overvoltage Protection
Proper power-supply sequencing is recommended for all CMOS devices. Do not exceed the absolute maximum ratings because stresses beyond the listed ratings may cause permanent damage to the devices. Always sequence V+ first, followed by VL, V-, and logic inputs. If power-supply sequencing is not possible, add two small signal diodes in series with the supply pins for overvoltage protection (Figure 1). Adding diodes reduces the analog signal range to 1V below V+ and 1V below V-, but low switch resistance and low-leakage characteristics are unaffected. Device operation is unchanged, and the difference between V+ to V- should not exceed $+44V$.
